

SANTA ANA, CA OCTOBER 3, 2005 -- Controlled Motion Solutions (Comoso) announced the acquisition of Parker Hannifin's West Coast Fluid Power Operation. This Sacramento branch allows Comoso to expand market share and secure a strong presence in Northern California and Nevada.

This most recent acquisition allows Controlled Motion Solutions to increase their product offering of fluid power products, and now includes the sale, repair, and rebuild of Denison, Parker, Dynex, SPX, Linde, and Auburn products. They recently acquired Parker Motion & Control Store in Irvine.

It also provides WCFP with more fluid power products, as well as the ability to foray into hose and fittings, pneumatic, electromechanical, seal, filtration and lubrication applications. It also provides our Northern California customers with engineered systems and integration services that power and control equipment across a broad range of markets and applications. This move further provides our customers with a one-stop solution to their motion and control needs in mobile, industrial and commercial markets.

"We are excited to have the West Coast Fluid Power team join us. We look forward to expanding our business capabilities to provide our customers with an even broader array of products, services, support and systems. The addition of our Sacramento branch reinforces our position as one of the top fluid power companies in the west," said Mark Law, Co-President of Controlled Motion Solutions.
