Diesel Fuel Cart

Portable Diesel Fuel Filtration Cart

ENGINEERING YOUR SUCCESS.

Therapeutic

- off-line and portable
- provides flexibility for removing water and contaminants from fuel
- improves and extends fuel life and system components

Diesel Fuel Cart

- Filtering new fluid before putting into service
- Transferring fluid from drums or storage tanks to system reservoirs
- Conditioning bulk fluid in storage tanks
- Compliments existing system filtration
- Removes free and emulsified water from a system

Parker's comprehensive asset health management approach extends well beyond traditional methods and brings focus to long term fuel system performance and reliability. Pre-filtration and transfer of diesel and biodiesel fuels is critical in maintaining today's fuel injection systems and extending system component life.

Tight tolerances and higher system pressures require significant improvement in fuel cleanliness and quality. The

Parker Diesel Fuel Cart delivers on the promise of high efficiency removal of harmful contaminants that impact injector life and compromise engine performance. Like most fuels, diesel requires filtration prior to use and after long periods of storage.

The use of the Parker Diesel Fuel Cart is a practical and economical maintenance tool that contributes to optimum engine performance, regardless of application.

Applications

- rail
- mining
- marine
- oil & gas
- agriculture
- transportation
- construction
- stand-by power
- equipment rental locations
- anywhere diesel fuel is used and/or stored

Features	Advantages	Benefits
Wide variety of elements available	Meets cleanliness standards	Extends component life and improves system performance
Heavy duty frame	Rugged and durable	Built to last
Lightweight and portable	Easy to move from place-to-place	One operator
Eleven-foot hose and wand assemblies included	Additional hardware not necessary	Ready to use as received

Polished,
clean fuel.

The DFC polishes the fuel with the Parker FBO-14 filter, which does not require any tools for filter change outs.

Parker's E-Z Form™ MP Series 7219 Hose provides the DFC a flexible, low pressure suction/return hose and vehicle fuel fill connector line specifically made for diesel.

The DFC utilizes an industrial rated motor and a Parker H series fixed displacement loaded gear pump which has a high tolerance to system contamination.

Specifications

Maximum Recommended Fluid

Viscosity:

Diesel – 200 SUS (44 cSt);
0.85 specific gravity

Flow Rate:

16 gpm

Visual Indicator:

15 psid Visual differential

Operating Temperature:

-8.1°C to +66°C (17.5°F to +150°F)

Electrical Service Required:

110/220 volts, 60/50 Hz,
single phase, 9.6/4.8 amps

Electrical Motor:

¾ hp @ 3450 rpm, TEFC

Construction:

Cart frame – Steel
Filter head – Die Cast
Filter bowl – Steel
Hoses – Nitrile
Wands – PVC

Weight:

48.5 kg (107 lbs.)

Dimensions:

A = Height: 1034 mm (40.7 in)
B = Width: 648 mm (25.5 in)
C = Depth: 503 mm (19.8 in)

Features and Benefits

Hose & wand assembly:

Parker's E-Z FORM™ MP Series 7219 kink-resistant nitrile hose

Visual indicator:

Tells you when to change element

Heavy Duty frame:

Rugged and built to last

Gear pump:

Parker H Series, long life

Element Service:

FBO-14 fuel filter, which does not require any tools for filter change outs

110V/220V AC motor:

Industrial brand name

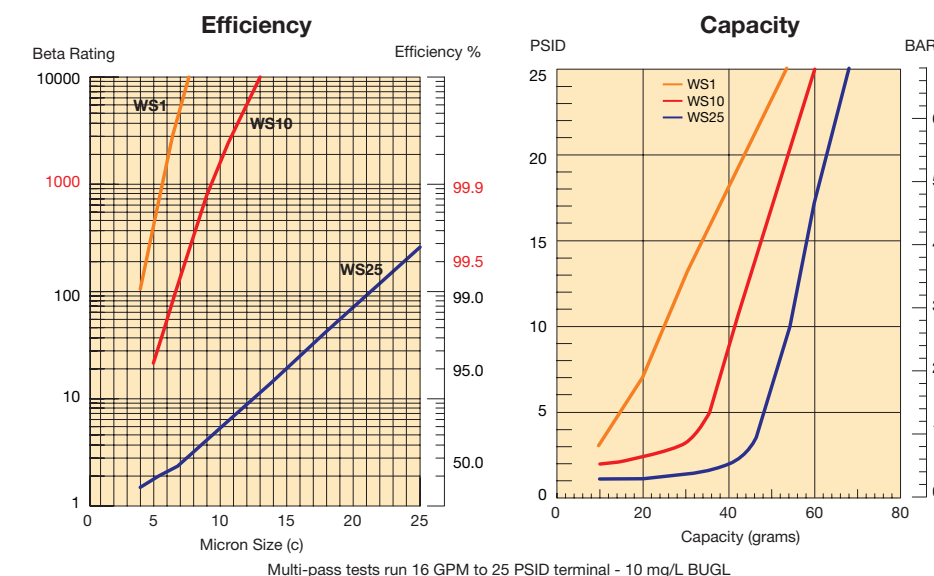

Drip tray:

Helps keep the work area safe and clean

Element Performance

New Tier 4 Diesel Engines require finer filtration and better performance.

Typical engine fuel contamination levels, established in 1998 by Worldwide Fuel Charter Committee, required cleanliness of 18/16/13 per ISO 4406. Due to technology advances in High Pressure Common Rail injection systems, the new engines manufactured today require cleanliness levels as low as **12/9/6 or better**. Injector pressures are exceeding 30,000 PSI and smaller nozzle openings are driving the requirements.

Diesel Fuel Cart

Element Choices

WS
Water separator elements are critical when there is a need to remove both particulate and water contamination from fuels. Testing has shown the WS 25 micron element is capable of achieving >99.5% single pass particulate removal efficiency.

ST
Silicone treated elements are ideal for removing particulate contaminants like dust, dirt, rust, sand, scale etc. from fuels. Testing has shown the ST 25 micron elements are capable of achieving >98.8% single pass particulate removal efficiency.

Diesel Fuel Cart

Assembly & Operation

Assembly

1. Install hoses to filter by threading the hose end with the straight thread o-ring seal fitting into the pump inlet and filter outlet ports.
2. Connect the PVC tube wands to the swivel fitting on the hose end. When servicing the PVC tube wand, do not over-torque the metal fittings going into the PVC coupling. Over-torque will result in cracking the coupling. Generally, 1/4 turn beyond hand-tight is sufficient.

Maintenance Instructions

1. Turn switch to OFF position and unplug cord from electrical outlet.
2. Disconnect Deutsch ground wire from bowl. (See #14 on Parts List)
3. Remove tube wands from fuel to prevent siphoning.
4. Open the vent valve on the head to allow the unit to thoroughly vent before loosening the four (4) head knobs.
5. Open the drain valve on the bottom of the housing to allow all fluid to drain from the unit.
6. Loosen the four (4) knobs attached to the head.
7. Remove the head gasket and discard.
8. Remove and discard the expended cartridge; Note: The used cartridge may become a fire hazard, discard in a fire safe place in accordance with all fire safety laws.
9. Flush the interior of the housing with clean, processed, filtered fuel or solvent; Note: A non metallic bristle brush may help remove caked-on debris. Rinse the housing and head with a soft, lint-free cloth.
CAUTION: Due the toxic effects of some additives in filtered fluids, care should be taken in handling the expended cartridge and/or all internal parts that have been in contact with the filtered product.
10. Lightly lubricate the new O-ring with Vaseline or petroleum jelly and position it on the head. If Vaseline is not available, lubricate gasket with clean fuel or clean oil.
11. Insert a new cartridge into the housing. Position housing (with cartridge) underneath filter head. Push/Twist cartridge on to head spigot. The head conical spring will seat/seal the cartridge into the housing.
12. Rotate housing onto the bolts. Hand tighten knobs until head is snug to the housing.
13. Close the vent valve when a small amount of fluid starts to come out.
14. Reconnect Deutsch ground wire to bowl. (See #14 on Parts List)
15. Examine all connections and seals for leaks, shut down immediately if leaks are present.
NOTE: Do not tighten head bolts if unit is pressurized, crack open vent valve to relieve pressure then address leaks.

Operating Instructions

1. Insert the inlet wand assembly into the supply fluid receptacle (drum/reservoir).
2. Insert the outlet wand assembly into the clean fluid receptacle (drum/reservoir).
3. Verify that the ON/OFF switch is OFF and plug the cord into the proper grounded power source (3 wire).
4. Turn switch to ON position and check outlet wand for fuel flow. Allow 30 to 60 seconds for filter to fill with fuel. If repeated attempts to obtain fuel flow fail, check pump inlet fittings for tightness, remove bowl and verify the cover sealing o-ring is in place. It may be necessary to pour 1 or 2 quarts of fluid in to prime pump initially.
5. The condition of the filter element should be monitored by observing the cleanliness indicator on the top of filter. When the indicator is in the CHANGE position filter element MUST be replaced.
Warning: Do not restrict the outlet hose with a shut-off valve, causing excessive pressure, which may be harmful to personnel or to the filter cart.
6. The 15 psid cleanliness indicator responds to differential pressure changes and will indicate the condition of the element.
NOTE: The filter cart must be in operation for the indicator to read properly.

Troubleshooting

Problem	Cause	Solution
Does not start	ON/OFF Switch	Turn switch ON, replace switch if defective
	No electrical power	Plug in Cart
	Defective motor	Replace
No fuel flow or erratic pump noise	Filter housing not filled with fuel	Allow pump to run 30 to 60 seconds
	Suction Leak	Check tightness of inlet fittings
		Kink or restriction in inlet hose
		Add 1 or 2 quarts of fuel to inlet hose
	Defective Pump	Replace Pump
Indicator Reads BYPASS	Element Dirty	Replace or Clean Element
Indicator does not seem to move	No Element	Install Element
		Check cart model number to verify correct element.

How to Order

Select the desired symbol (in the correct position) to construct a model code. Example:

BOX 1	BOX 2	BOX 3	BOX 4	BOX 5	BOX 6	BOX 7	BOX 8
DFC	14	WS	10	V	V	X	1

BOX 1: Filter Series

Symbol	Description
DFC	Standard Cart

BOX 2: Model Length

Symbol	Description
14	Double

BOX 3: Media Code

Symbol	Description
WS	Water Separator
ST	Silicone Treated

BOX 4: Degree of Filtration

Symbol	Description
01	1 micron
10	10 micron
25	25 micron

BOX 5: Seals

Symbol	Description
V*	Fluorocarbon (FKM)

* E-Z Form™ MP 7219 Nitrile Hose

BOX 6: Indicator

Symbol	Description
V	Differential Visual

BOX 7: Bypass

Symbol	Description
X	No Bypass

BOX 8: Options

Symbol	Description
1	None

Replacement Elements

FBO Cartridges	Micron Rating	Water Separator	Silicone Treated

	10	945517	945521
	25	945518	945522

Accessories

Part Number	Description
945292	Concentric Wand

Single Point Suction & Return

945292

- 1" diameter suction tube
- Fits in openings 1.5 inches and larger
- 32" suction depth
- In-tank filtering
- One port access to the tank
- All steel construction
- Patent pending

Hydraulic Filter Division

Your prescription for total system health.

Dedicated to the long term health and reliability of mission critical assets, Parker Hydraulic Filter Division offers you innovative products that cover your diagnostic, therapeutic and preventive needs.

Total System Health Management

Diagnostic - Monitors - Detects - Alerts

Therapeutic - Supports - Improves - Fortifies

Preventive - Long Term Defense / Value - Reduced Cost of Ownership
