

# REUSABLE MAGNETS

## FOR USE WITH SPIN ON FILTERS

The Bear Trap line of reusable filter magnets are designed to remove ferrous metal particles from hydraulic fluids, oil, fuel, coolant water and transmission fluids. Removes particles the filter doesn't catch. Prevents downstream system damage by trapping metal particles in filter. When changing the element, after removing from the system, remove the magnet from the "can" and attach it to the new element. For use with all brands of disposable filters including those used on domestic and foreign motor vehicle engines, racing engines, diesel engines, transmissions, marine engines, motorcycle engines, hydraulic systems, fuel filters, and coolant filters.

Two sizes available - BT500 (2-1/4" sq.) and BT800 (3" x 6").

# REPLACEMENT LUBE FILTERS

This high-quality, in-line lubricant filter replaces units by Purolator, Cincinnati Milacron, and Danly, at substantial savings. It finds wide application in filtering lubricant and coolant on machine tools, and for many other tasks.

The sealed metal canister contains a high-density, pure cellulose filter element with over 400 square inches of filtering area. Standard element is rated for 10 micron.
