# PDRD Refrigeration Dryers

## Features and Benefits

### Point-Of-Use Clean Dry Air System

- High quality clean dry air in a compact design exactly where it is needed.
- Compact, simple and cost effective way of providing clean dry air at the point-of-use for applications.

### Easy To Maintain and Operate

- Compact dimensions
- Easy dryer positioning (condenser air flow, compressed air connections and drain connections all maintained within two operating sides, leaving other free).
- Full internal access to major components by removing single canopy, maintenance from one single side.
- The dryer utilizes an automatic bypass control that precisely controls the operation of the dryer – no seasonal adjustment.
- Virtually maintenance free.
- Drain mounted inside a niche.

### Simple “Plug & Play” Design

- PDRD10 - PDRD125 dryers are supplied with 6 foot power cord for easy installation and operation.

# PDRD Refrigeration Dryers

## Features and Benefits

### Innovative PlusPack Heat Exchanger (patent pending)

- Robust all-in-one aluminum construction.
- 3-in-1 construction of housing, evaporator, and heat exchanger.
- Integrated air connections increase overall robustness and reliability by reducing potential refrigerant leak points.
- Air-to-air freecooler on all models (reduces power consumptions, no sweating downstream, and protects dew point).
- Ultralow 1.45 PSIG differential pressure provides energy savings.
- Includes pre-cooler/re-heater for greater energy efficiency and eliminates pipe sweating downstream.

### “Slow Flow” Demister Separation Technology

- Non velocity dependent moisture separation technology. Unlike centrifugal separators, it maintains excellent moisture separation efficiency at reduced air flows.
- Ensures dew point performance (moisture removal) across all operating conditions.

# PDRD Refrigeration Dryers

## Features and Benefits

### Control Section

- On / Off switch with lamp.
- Three zone dew point indicator provides at a glance indication of dryer performance.
- Avoid damage to equipment and problems downstream.

### Virtually Maintenance Free Operation

- The dryer utilizes an automatic bypass control that precisely controls the operation of the dryer – no seasonal adjustment.

### R134a Refrigerant on All Models

- Environmentally friendly.
- Low global warming potential and unlike R22 (2010), there is no phase out planned (Montreal Protocol compliant).
- Very well suited for efficient operation in warm ambient temperatures.
