

56 Series Validation

Parker Hannifin has very clear and strict global guidelines and specifications how to approve products (e.g. APQP process). Parker has applied these certifications plus additional tests to the 56 Series fittings and its respective hose types.

The 56 Series has been established in the marketplace for over 10 years. Parker has gathered global field experience with various major OEMs and a multitude of distributors. The gained experiences gave us confidence to base our new global strategy on the 56 Series.

To maintain excellent product quality and consistency, we ran a comprehensive test program.

Some examples:

- Trials assuring easy and consistent hose assembly
- Burst length tests
- Temperature cycle tests
- Impulse tests
- Fitting pull-off tests
- Leakage test of aged hoses after extensive impulse testing
