**RACKS AND PINION** – Heat treated and hardened chrome alloy steel for shock resistance and long wear life; heavy-duty gear design with large pitch diameter reduces angular backlash.

**RACK BEARINGS** – Large self-aligning bronze rack bearings for low bearing pressure and long life.

**WEAR BANDS** – Bronze impregnated PTFE is standard, provides smooth sliding motion while protecting the cylinder walls against metal to metal contact. Optional wear band material can be specified for high speed and high load conditions.

**PISTON SEALS** – Heavy duty Molythane PolyPak seals are self-compensating for wear and long life between maintenance.

**CYLINDERS** – Precision micro-finish honed seamless alloy steel tubing, thick-walled.

**END CAPS** – Alloy steel, rugged mill type construction.

**PORTS** – Standard SAE 4-bolt flange, tapered pipe threads or straight threads.

**LARGE BORE PINION** – Fits directly on customer's shaft; eliminates need for coupling.

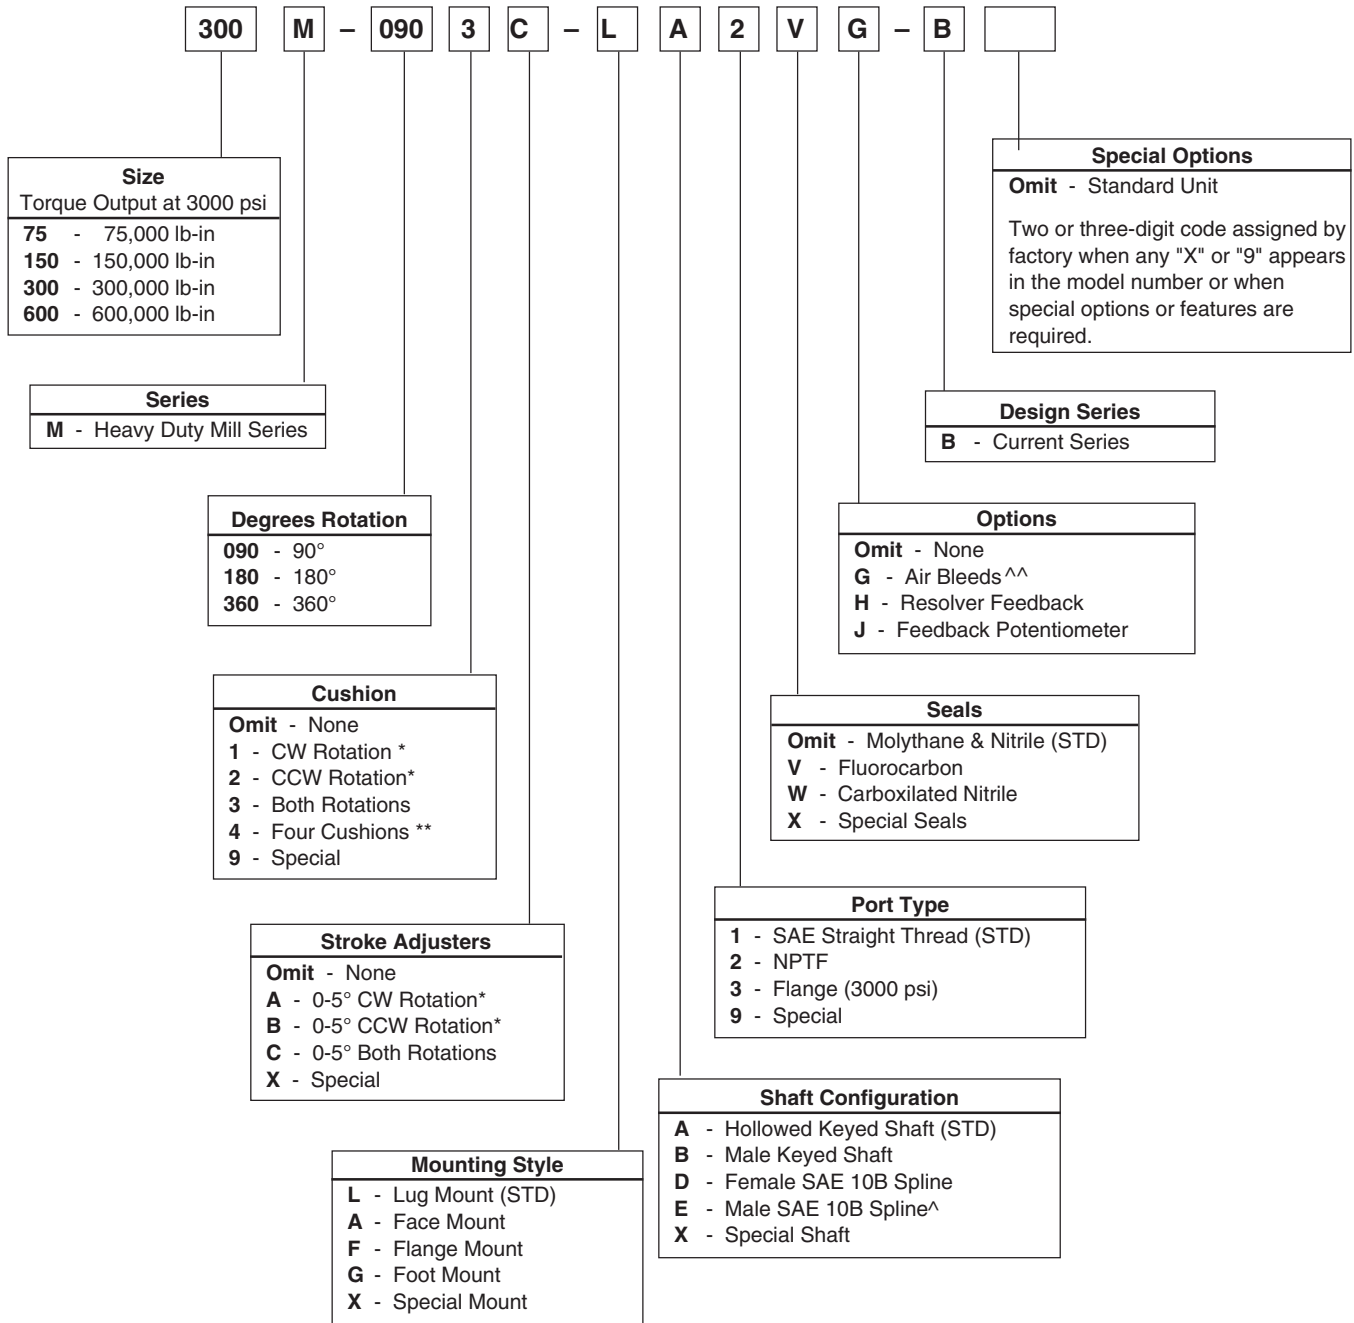

**HOUSING** is high strength ductile iron, rugged one-piece construction or steel weldment.

**NOTE:**

All pressure-containing seals can be inspected or replaced without removing the actuator from customer's shaft.

\*\* Double Rack Models Only

^ Not available with 300M or 600M actuators. A 39T involute spline shaft is available.

^^ Std. on models larger than 1000M

## M Series Heavy Duty Mill Rotary Actuator

Designed to meet steel mill specifications. These non-tie rod units incorporate a range of features to provide heavy duty service dependability. The larger than normal heat treated pinions provide low tooth contact pressures and permit hollow shaft configurations with bore sizes capable of transmitting full operating torques, including shock loadings. In order to negate the chances of galling or scoring of the cylinder barrels, the Series M units are fitted with wear ring bushings that provide full support and eliminate the possibility of contact between cylinder and piston. The use of large diameter, tapered roller bearings on the pinion permit the actuator to absorb considerable thrust, radial and overhung loads. For ease of maintenance, all pressure seals on Series M can be inspected or replaced without removing the actuator from the customer's shaft. To ensure shipment of only the highest quality product, each actuator is fully tested and has an individual test sheet completed before final painting and shipment.

### SPECIFICATIONS

- Maximum operating pressure: 3000 psi (207 Bar) hydraulic
- Standard rotations: 90°, 180°, 360°
- Rotational tolerances: -0°, +2°
- Output torques @ 3000 psi (207 Bar): 75,000 lb-in to 50,000,000 lb-in
- Maximum breakaway pressure: 75 psi (5 Bar)
- Operating temperature:
  - Standard nitrile seals -40° to 180°F (-40° to 82°C)
  - Fluorocarbon seals -20° to 250°F (-29° to 121°C)
- Mounting orientation: Unrestricted
- Timing: Keyway located at 12:00 position at midstroke of actuator
- Housing:
  - Heavy duty ductile iron (units up to 1000M),
  - steel weldments (units larger than 1000M)

\* Must deduct work (energy) done to overcome potential energy effects of load.  $W_{PE} = T_{PE} \times \theta$ , where  $\theta$  is in radians.

\*\* Extreme care must be exercised so that both cushions are adjusted equally for each direction or dangerous pressure intensification and gear train stresses could result. (Suggest high performance cushion option.)

## Cushion Deceleration Control

The cushion causes the resisting torque that can be used to decelerate a rotational load. Please note the cushion has to provide enough resistance to control: drive torque caused by the hydraulic system pressure; plus the torque caused by gravity pulling on the rotational load; and the kinetic energy associated with the motion of the inertia load. Since the actuator's cushion has to be able to control the sum of all three torque factors, we suggest including cushion capacity as one of the actuator's selection criteria.

It is strongly suggested that proportional valves be used instead of cushions to control (decelerate) high inertial loads. This provides the ability to reduce inlet pressure while generating deceleration pressure. It also allows for longer ramp times, thus increasing deceleration stroke.

### SUPPLEMENTAL INFORMATION KINETIC ENERGY BASIC FORMULA

$$KE = 1/2 J_m \omega^2$$

$$\omega = 0.0175 \times \frac{2\Theta_A + \Theta_C + 2\Theta_D}{\text{Rotation Time (sec.)}}$$

where:

KE = Kinetic Energy (in-lb)

$J_m$  = Rotational Mass Moment of Inertia (in-lb-sec<sup>2</sup>)

$\omega$  = Peak Velocity (rad/sec)  
(Assuming trapezoidal velocity profile)  
See page 8 or the LTR Section for formulas.

$\Theta_A$  = Acceleration Angle (deg)

$\Theta_C$  = Constant Velocity Angle (deg)

$\Theta_D$  = Deceleration Angle (deg)

### Bearing Load Capacities

Each M Series Actuator is fitted with heavy duty tapered roller bearings as standard and can support high external loads. The table provides load capacities for each unit.

Any distance "A" possible as long as bearing limits are observed. See overhung moment equation.

**BEARING CAPACITIES "M" SERIES ROTATOR**

Model	Radial Load-lbs. Per Bearing ( $R_L$ )		Thrust Load-lbs. ( $R_T$ )		Bearing Center ( $B_c$ ) Distances Inch	Overhung Moment, Inch-lbs. $R_L \times (A + B_c/2)$

\* Units 1500M and above have dimensions that are subject to change. Consult factory on these dimensions before any design implementation is initiated.

Note: All dimensions in inches unless otherwise specified.

**Cushions (1, 2, 3, 4)**

The standard cushions operate over the last 20° of rotation in either or both directions. A floating bushing ensures no binding of cushion spear. For severe operating conditions, 4 cushions should be fitted on double rack units.

All cushions are fully adjustable. Double rack units should be fitted with Type 4 cushions.

**NOTE:** Proportional valves are recommended instead of cushions for high inertial loads.

Model	Z
75M	.50
150M	.50
300M	.25
600M	.25
1000M	.00

Cushion Kinetic Energy Capacity				
Model	Cushion Code	Dissipation (Inch lbf)	Cushion Code	Cushion Work (in-lb)
75M	3	27,630	1,2	27,165
150M	4	55,300	1,2,3	27,165*
300M	3	84,190	1,2	104,700
600M	4	168,370	1,2,3	104,700*
1,000M	4	192,000	1,2,3	192,000*

\* Must deduct work done by any existing drive pressure and work done to control potential energy.

**5° Stroke Adjusters (A, B, C)**

Model	(1) Turn Adj.
75M 150M	1°
300M 600M	8°
1000M	7°

**NOTE:**

1. Maximum unit rotation is equal to rotation specified in model code. Adjusters allow rotational positioning equal to or less than the maximum rotation.
2. Stroke adjusters are available with or without cushions. Double rack units will have cushions and stroke adjusters on lower rack.

Note: All dimensions in inches unless otherwise specified.

### Face Mounting (A)

Model	Torque lb-in @ 3,000 psi	A	B <sub>s</sub>	B <sub>d</sub>	C	D	E	F
75M	75,000	8	11.75	N/A	9.25	5/8-18 x 15/16 DP	3.81	8.000
150M	150,000	8	N/A	14.25	9.25	5/8-18 x 15/16 DP	3.81	8.000
300M	300,000	11-7/8	17.13	N/A	12.50	3/4-16 x 1-1/8 DP	5.69	11.000
600M	600,000	11-7/8	N/A	21.75	12.50	3/4-16 x 1-1/8 DP	5.69	11.000
1,000M	1,000,000	13-5/8	N/A	24.75	14.50	1-1/4-12 x 1-7/8 DP	6.75	12.000

### Face Mounting Bi-directional Torque Capacity (without dowel devices)

Model	Bolt Size	Suggested Bolt Torque (lb - ft)	Bi-Directional Torque Capacity* (lb - in)
75M	5/8-18 x 15/16 dp	100	105,495
150M	5/8-18 x 15/16 dp	100	105,495
300M	3/4-16 x 1-1/8 dp	160	167,200
600M	3/4-16 x 1-1/8 dp	160	167,200
1,000M	1-1/4-12 x 1-7/8 dp	720	496,800

\* With additional reinforcement.

Bi-directional bolt torque capacity is equal to:

$$\mu \times \text{clamp load} \times \text{lever arm length from center of rotation}$$

( $\mu = .3$  assumed).

### Suggested Reinforcement

Model	Dowel Ø	Qty.	Bolt Circle Diameter
150M	.75	2	8
300M	.75	4	11
600M	1.00	4	11
1,000M	1.00	8	12

Note: All dimensions in inches unless otherwise specified.

**Flange Mounting (F)**

In addition to the flange shown, made to order sizes can be manufactured.

Model	Torque lb-in @ 3000 psi	A	B <sub>s</sub>	B <sub>D</sub>	C	D	E	F	G	H	J
75M	75,000	9-1/4	11.75	N/A	7.500	9.500	1.063	5.06	1.25	19.25	17.250

300M 600M	39T, 30° involute splined shaft is available. Consult factory.				
1000M					

Note: All dimensions in inches unless otherwise specified.

**Ports (1, 2, 3)**

SAE straight thread ports or 4 bolt flanges are recommended for all applications. NPT ports are available but not recommended.

Model	Standard SAE Straight Thread (1)	NPT (2)	4 Bolt Flange (3) SAE J518 (3000 psi)
75M 150M	1-1/16 -12 (SAE 12)	3/4	3/4
300M 600M	1-5/16 -12 (SAE 16)	1	1
1000M	1-5/16 -12 (SAE 16)	1	1

**Seals (V, W)**

Seal Class	Seal Type	Wear Ring Type	Fluid Medium	Temperature Range	Filtration
Standard	Molythane PolyPak	Filled PTFE	General purpose, petroleum-based fluids	-40°F to 180°F -40°C to 82°C	ISO Class 17/14 Cleanliness Level
Viton (V)	Fluorocarbon	Filled PTFE	High Temperature and/or Synthetic Fluids	-20°F to 250°F -29°C to 121°C	
Nitrile (W)	Carboxilated Nitrile*	Filled PTFE	Water Glycol, High Water Content Fluids	30°F to 180°F 0°C to 82°C	

\* Not available in every size. Factory will automatically make appropriate substitutions as necessary.

***For Seal Kits and Spare Parts, contact the Pneumatic Division at 330-336-3511.***

**Feedback Packages**

Feedback packages available for use with M Series rotary actuators include:

- Precision feedback potentiometer (J)
- Precision resolver feedback (H)
- Linear potentiometer feedback (Oilydyne Teknar)
- LDT feedback (MTS Temposonics)

The feedback potentiometer (J) and resolver feedback (H) may be ordered as part of the model code. The other options must be ordered separately.

See Sensors section for specifications.
