## Safety light barriers

## Note

- For protection in Control Category 4 to EN 954-1
- Monitoring up to four pairs of light barrier devices and the power contactors using the SLB 400-C safety monitoring module
- The wiring diagram is shown for the de-energised condition.
- Connection of two pairs of safety light barrier devices
When two pairs of safety light barriers are connected, the terminals X9-X10 and X11-X12 must be bridged.
- Restart push button ${ }^{\circledR}$

The restart function can be selected by means of the DIP switches. When a start push button is connected to X 5 and X6, it must be operated for $\min .250 \mathrm{~ms}$ and max. 5 s after an interruption of the safety light barriers.
