

Machine Guarding Safety Products

GK-1 Catalog | 11th edition

SCHMERSAL

www.comoso.com

If machine safety regulations look like this to you...

let Schmersal show you the way.

Yes, there's a myriad of national and international regulations to follow with increasing emphasis on greater tamper-resistance, fail-to-safe design, and "control-reliable" operation. And frankly, some of it can be confusing. To satisfy these requirements, design engineers and safety professionals worldwide are choosing SCHMERSAL's tamper-resistant machine guarding components.

These rugged, watertight units feature positive-break NC contacts, a wide range of application

accessories, and unique actuating mechanisms that resist bypassing/overriding. SCHMERSAL offers over 250 safety interlocks with matched safety relay modules to satisfy the highest levels of assessed risk.

Navigating through the maze of the latest ANSI, OSHA and international safety regulations to compliance need not be difficult. Easy-to-use solutions can be found in this latest edition of our catalog-handbook

Important note!

The devices of our product range found in this catalog are not consumer goods; only competent and qualified persons with appropriate electrical and technical training may carry out the selection and installation of the devices.

The data specified in the catalog are fully checked typical values. Descriptions of technical correlations, details on external control units, installation and operating information or similar in this catalog have been checked thoroughly and are provided to the best of our knowledge at the time of publication. Products are constantly being modified and updated. Users must check our information and recommendations before using our components.

Complete technical data, wiring and installation instructions, wiring diagrams, ISD tables and other information is up to date in our online product catalog, available at www.usa.schmersal.net.

Schmersal North America

Always Available

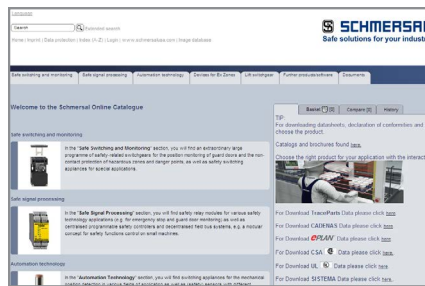

In the United States and Canada Schmersal is represented from locations in Tarrytown NY and Brampton, ON. From these two warehouse locations Schmersal supports and distributes products through our established distribution network. Utilizing the combination of stocking distributors and the knowledgeable engineering sales team at Schmersal, we are always available to supply products and support customer applications.

Our vast working knowledge of local and international standards has allowed Schmersal North America to lead the way in helping customers understand the requirements for specific applications. Our trained machine safety engineers are available to guide customers through the maze of safety standards that are seen today. Whether it is a simple application or a complex safety system Schmersal can help you understand the applicable safety standards to help guide you to the appropriate product selection which is best suited for your machine or process.

Safe Solutions for your industry

Safety in system – Protection for man and machine

Following this principle Schmersal has become a leader in the design and manufacture of safe switching products and systems for various industries. In almost every field of work or industrial application there are inherent risks and different requirements for safety for man and machine.

At Schmersal we realize that every application is different and that there are specific risks and specific environmental conditions that should be considered when selecting safe guarding products. By understanding this Schmersal has developed industry specific solutions to help guide you to the best suited product or system for your application.

AZM300 Electronic Solenoid Lock

Innovations

For over 65 years Schmersal has developed a reputation for the design and manufacture of reliable quality products. Today with over 25,000 products in the Schmersal product portfolio, innovation remains paramount as Schmersal continuously designs and develops products to meet the demands of the never ending evolution of industry. From precision electromechanical position switches to patented leading edge Pulse Echo technology, Schmersal continues to lead the way in machine safety product solutions and systems.

RSS260 Compact RFID Safety Sensor

TESK Hinged Safety Switch

Industrial Solutions Food

Industries

Harvesting, drying, filleting, heating, grinding, mixing, bottling and packaging: food production involves a lot of process steps, most of which are run by machines. Not only do machine safety standards and guidelines need to be followed during these processes, safety switchgear or controlgear at the human-machine interface also have to meet strict hygiene requirements. In other areas, a high degree of temperature resistance or resistance to moisture is required. Explosion protection also plays a role in the processing of powdered raw materials or products.

Products

Schmersal has developed several products which meet protection class IP69K and use stainless steel and other ECOLAB certified materials for their enclosures: The AZM300 Solenoid interlock, safety sensors like the BNS40S, CSS40S, RSS36, our Safety Light Curtain SLC420..69, and our K series of industrial grade joysticks.

Another product group dedicated to food production is the N series of command and signalling devices. They meet the requirements of EN 1672-2 (Food processing machinery: Basic concepts - Hygiene requirements), are IP69K rated, and are now certified for use in clean rooms.

Applications

Industrial Solutions Packaging

Industries

Machines and systems used in the packaging industry are often operated at high speed and with short cycle times. They are frequently part of the entire production and/or packaging lines. For this reason, guard systems should only interrupt production processes or negatively influence system productivity when absolutely necessary. They must also work with extreme accuracy on a 24/7 basis.

Products

Many safety switchgears from the Schmersal Group preferred in the packaging machine building industry are designed so that unplanned stoppages of machinery are avoided. Safety switchgears with an integrated AS safety at work interface and our compact safety control PROTECT SELECT are also often used in this industry. New and innovative solenoid interlocks such as the MZM 100 and AZM 300 were also developed with the special needs of the packaging industry in mind.

Applications

Industrial Solutions Elevators and Escalators

Industries

The Schmersal Group has a hand in the fact that elevators are the safest transport device in the world. For many decades now we have been one of the world's leading makers of switchgears for elevators and escalators, offering these industries a wide range of products. All lift switchgears meet relevant international requirements and operate fault-free and failproof even under adverse conditions.

Products

We have developed specific products used for locking and safely monitoring elevator doors and in the safety circuits of elevator control systems. The product line includes floor and fine-adjustment switches, positive-break door contacts, position switches, solenoid switches, emergency call systems, custom assembled top of car/ inspection control boxes, as well as the USP non-contact positioning system. We have also developed custom switchgear for special tasks such as the electric shutdown of the lift system upon actuation of the speed limiter. In addition, through the merger of Böhnke & Partner with the Schmersal Group, we can offer complete control technology at the highest level of engineering and quality

Applications

Industrial Solutions Heavy industry

Industries

We have more than six decades of experience with heavy industry as the Schmersal Group was originally a manufacturer of high-grade switchgear. Today our products are used everywhere where special requirements exist in difficult and harsh operating environments mining, construction machinery, ship engineering, various types of cranes and hoisting devices as well as power generation

Products

Many of the switchgears we have developed for heavy industry, differ from other series. They are very robust, oftentimes even significantly larger, and are radically designed for high durability even at extreme stresses. This product group includes our heavy position switches, foot switches, heavy-duty command devices, belt alignment switches and pull-wire emergency stop switches.

Applications

Industrial Solutions

Machine tools

Industries

Machines in the metal processing industry operate with extremely high accuracy requirements at ever increasing speeds and need to be as flexible as possible. Safety switches used here should not affect machine productivity or flexibility. In addition, they must be easy to retrofit and must allow quick trouble-shooting. Protection against tampering must always be in the forefront.

Products

Solenoid interlocks are often used in machine tool building to prevent the interruption of processes or to protect against hazards arising due to overrunning. The Schmersal Group offers a wide product range for the most diverse requirements, covering even special operating modes such as process monitoring and setting mode.

Applications

Industrial Solutions Automobile

Industries

High degree of automation, interruption-free processes, high degree of standardization, great importance of factory standards: these, in brief, are the key features of automobile manufacturing in terms of machine safety. Another characteristic is the intensive use of robots and interlinked production lines.

Products

Our solenoid interlock program includes systems that were specifically developed for accessible hazardous areas and offer options such as an emergency exit with emergency handle. In the control engineering field we have also developed solutions that make it almost impossible for persons to be shut inside a hazardous area. In addition, we have extensive experience in the design of safe robot workstations with or without perimeter guarding.

Applications

AS-i Safety At Work

Safety system with simple structure

Safety with system:

This is in a few words the basic idea behind the Schmersal System. This system has a simple structure: at field level, safety switchgear with integrated „AS-Interface Safety at Work“ (AS-i Safety) interface are used. They are wired to a master-monitor combination or Safety Gateway modules, which can process up to 60 safe dual-channel input and output signals, through the cost-efficient installation system AS-Interface. The status and diagnostic signals can be processed by higher-level control systems and from there on transmitted to control or visualization systems.

The user can decide between two basic concepts.

Safety Separated ...

Many machinery builders also like to use uniformly structured safety circuits for different operational PLC systems. Therefore, they prefer a safety control system, which is separated from the normal control system. For this „Safety Separated“ concept, the Schmersal System offers master/monitor combinations with different field bus interfaces. The entire safety logic is programmed using the easy-to-use ASIMON software in the safety monitors.

Three solutions are available:

- for one AS-i circuit with up to 30 safe inputs/outputs
- for two AS-i circuits with up to 60 safe inputs/outputs
- for a safe cross-communication between up to 31 master-monitor combinations and therefore for more than 1,000 safe inputs/outputs

Through the conventional field bus interfaces PROFIBUS, PROFINET, EtherNet/IP or ModbusTCP, the master-monitor combinations with the normal PLC to transmit the non-safety-related status and diagnostic signals. The entire integration of the safety control system simplifies the diagnostics and reduces the standstill times in case of failures.

... or Safety Integrated?

The Schmersal System also includes Safety Gateways, which can be directly connected to safety control systems with safe field bus. They are designed for two AS-i circuits and transmit up to 60 safe inputs/outputs to the safety control system through a safe field bus. The operational, diagnostic-relevant signals are also transmitted to the higher-level control system, where they can be accordingly processed. A pre-processing of the safe signals in the Safety Gateway is also enabled through the ASIMON Software.

A complete program

With the Schmersal System, the machine builder has complete solutions for machinery safety from a single source.

For both concepts - either Safety Separated or Safety Integrated - multiple master-monitor combinations or Safety Gateways for the commonly used field bus systems are available. The basic solution for Safety Separated is a master-monitor combination for the input/output link of the safety circuit to the control system. This is a field bus-independent solution for safety circuits with up to eight safety switchgear and two safe outputs.

In addition to that, the Schmersal System program includes other monitoring-modules, such as safe speed monitoring, safe input and output modules, repeaters as well as a comprehensive range of accessories (bus distributors, power supply units, bus cables, M12 connecting cables...).

AS-i Safety as basis

The basis of the Schmersal System are the tried-and-tested safety switchgear with integrated AS-i safety interface. All essential ranges of the Schmersal program are available with AS-i nodes - for instance:

- Safety switch
- Solenoid interlocks
- Safety sensors
- Emergency stop button
- Control panels
- Pull-wire emergency stop switches
- Safety foot switches.

If the desired safety switchgear is not available with integrated AS-i Safety interface, it can be simply integrated into the AS-i Safety circuit through an external input module.

More information on this system is available in our **Schmersal - system solution** catalog or online at www.usa.schmersal.net.

Non-contact

The electronic monitoring of moving safety guards including actuation in non-contact solenoid interlocks enables the wear-free and non-contact detection of the respective actuator. The patented pulse-echo technology permits large tolerances in the approach of the coded actuator, both in the switching distance and the misalignment.

Despite this, the switching points and hysteresis are extremely repeatable and constant.

The performance and capabilities of the safety sensors and solenoid interlocks are covered by the following testing standards:

- Defined behavior under fault conditions to EN 60947-5-3, self-monitoring classification PDF-M
- Requirements on safety-related parts up to PL e to EN ISO 13849-1 or control category 4 to EN 954-1
- Requirements of IEC 61508 use up to SIL 3 applications

The requirements of IEC 61508 furthermore guarantee the user extremely high EM interference immunity. In addition, the standard allows that a signal is given for certain failures before the machinery completely switched off. This enables putting the machinery safely to a hold position before being switched off.

The using of microprocessor technology allows an intelligent diagnostic as well as a smooth and fast failure detection, e.g. in case of cross-shorts or wiring errors.

The safety channels of the electronic sensors and electronic solenoid interlocks can be wired in series to build a chain of up to 31 components, depending on the type of device used. Because of the independent functional check, control category 4 to EN 954-1 is

retained for this series-wired chain. Due to the self-monitoring circuit technology and the resulting favorable PFHd values, Sub-SIL 3 or Sub-PL e to IEC 61508 (EN IEC 62061) or EN ISO 13849-1 is regularly obtained. The chains can also consist of a mix of the safety sensors and solenoid interlocks described in this brochure.

Operating principle

All products of the CSS series have the same operating principle. They use the pulse-echo technology patented by Schmersal to detect the actuator.

The sensor emits electromagnetic pulses. When the actuator approaches the sensor, the actuator starts oscillating at a predetermined resonant frequency due to the induced energy. These oscillations are in turn read by the sensor. While doing this, the sensor evaluates the distance with regard to the actuator as well as the coding of the actuator. The actuator identified by the sensor is interpreted as a closed safety guard and the safety outputs are enabled.

Due to this operating principle, the sensor is not suitable for mounting behind metal walls, considering that the oscillation to be detected cannot penetrate the metal.

The CSS 30S stainless steel sensor is an exception here. This sensor can be used under covers in antimagnetic stainless steel.

with CSS technology

Application

The electronic safety sensors and solenoid interlocks are used for monitoring moving safety guards. When the safety guard is opened, the machine is stopped and the dangerous restart of the machine is in all cases suppressed.

Their essential advantage is in the non-contact detection of the safety guard's position. They therefore are completely wear-free and insensitive to misalignment or offset of the sensor and the actuator.

Electronic safety sensors

Due to their compactness, there are numerous applications for CSS sensors. Because of their high repeatability, an extremely low hysteresis and the absence of double switching points in the actuation range, they can be fitted to a wide variety of safety guards or they can be employed for position monitoring on machines axes.

The application possibilities, especially for the CSS 34, are further enlarged by the four different actuating planes as well as a large variety of actuators.

Mounting on aluminum profiles is in particular carried out smoothly and quickly by means of just two screws using the integral mounting plate. Rotating slotted washers in the mounting plate facilitate an accurate alignment, even with inaccurate mounting holes.

In this way, the sensors can be used in almost any place where required.

The encapsulated sensors and their actuator are insensitive to shocks, vibrations and dirt.

The CSS safety sensors consequently can be used anywhere, especially where protection against dangerous run-down movements of the machine is not required.

The CSS 30S safety sensor with stainless steel enclosure extends the range of application especially for hygiene-critical applications.

Due to its high resistance to mechanical or chemical influences, this safety sensor is also perfectly suitable for use in aggressive ambient conditions.

For safety guards, which are particularly exposed to tampering, the paired assignment (coding) of the CSP 34 safety sensor and its actuator offers an increased protection.

The CSP 34 is also available with the "on-site acknowledgment" option and integrated reset button connection.

Because of a special feedback circuit monitoring with reset function, the CSS 34F sensors are suitable for the direct control of safety contactors. This enables saving on wiring expenses and avoids the need of buying a dedicated safety controller.

Further information can be found in the "Electronic Safety Sensors and Solenoid Interlocks" brochure and in our online product catalog at www.usa.schmersal.com.

Solutions for your industry.

Application Finder

www.applicationfinder.net/us/home/

The Application Finder displays an interactive animated packaging plant floor. Users can click on one of the work areas which will open a window with a selection of Schmersal safety switching devices that are optimal for the particular application.

Each selection ultimately links to the Schmersal online product catalog website, where users can see technical data on the selected components.

There are many product-specific animations available throughout, explaining the operation of the switch or providing recommendations for the integration of safety technology into the processes of the machine.

Also available as an app for the iPad. Download from iTunes: search *Schmersal*

Safe switching and monitoring

Safety switch with separate actuator

Keyed interlock switches are used on sliding, hinged and removable guard doors that must be closed for operator safety. It is a two part system consisting of a switch body, mounted to the guard frame, and a separate actuator key, mounted to the door.

Models are available in a several mounting profiles and housing materials. Each model has a variety of actuator key options: straight, right angle mounting, floating head, and keys integrated into door handle assemblies.

Safety switch with separate actuator

Actuator AZ 17-B25

- Door-handle actuator for safety switches with separate actuator AZ 17-...ZRK (latching)
- Ergonomic operation
- No supplementary door-handle required
- No protruding actuator
- Simple mounting
- Several door-handles available
- Possibility to mount custom handles using a default square screw (8mm)
- Mounting plate for fitting to standard profiles optionally available

System components

Note

The safety switch or solenoid interlock is not included in delivery and must be ordered separately.

Please note that you need a device with latching (R).

The technical data of the AZ 17-...ZRK safety switch can be found in this main catalog page 1-2 or in the online catalog at www.usa.schmersal.net

	ST	Connector M12 bottom
	STL	Connector M12 left
	STR	Connector M12 right

Technical data

Standards: IEC/EN 60947-5-1
BG-GS-ET-15

Enclosure: glass fiber reinforced thermoplastic, self-extinguishing

Actuator: stainless steel 1.4301

Protection class: IP67 to EN 60529

Contact material: silver

Contact type: change-over contact with double break, type Zb or 2 NC or 3 NC contacts, with galvanically separated contact bridges

Switching principle: ⊖ IEC 60947-5-1 slow action, NC contact with positive break

Connection: screw terminals or connector M12, 4-pole

Cable section: max. 2.5 mm² min. 0.25 mm² (incl. conductor ferrules)

Cable entry: 3 x M20

U_{imp}: 6 kV

U_i: 500 V

I_{the}: 10 A

Utilization category: AC-15, DC-13

I_e/U_e: 4 A / 230 VAC
4 A / 24 VDC

Max. fuse rating: 6 A gG D-fuse

Positive break travel: 8 mm

Positive break force: 10 N for each NC contact fitted

Ambient temperature: -30 °C ... +80 °C

Mechanical life: > 1 million operations

Latching force: 30 N for ordering suffix R

Actuating speed: max. 2 m/s

Max. switching frequency: 4,000 operations/h

Classification:

Standards: EN ISO 13849-1

B_{10d} (NC): 2,000,000

B_{10d} (NO): 1,000,000

for max. 10% ohmic contact load

Mission time: 20 years

$$MTTF_d = \frac{B_{10d}}{0,1 \times n_{op}} \quad n_{op} = \frac{d_{op} \times h_{op} \times 3600 \text{ s/h}}{t_{cycle}}$$

Safety switch with separate actuator

AZ 200

Safety switch

- Thermoplastic enclosure
- Sensor technology permits an offset of ± 5 mm between actuator and safety switch
- Intelligent diagnostic
- Accurate adjustment through slotted holes (refer to table)
- 3 LED's to show the operating status
- 2 safety outputs, 1 diagnostic output
- Holding force 30 N
- Available with AS-Interface Safety at Work

Suitable for applications

- (without additional second switch)
 - up to PL e/category 4 to EN ISO 13849-1
 - suitable for SIL 3 applications to IEC 61508
- Series-wiring of max. 31 components, without detriment to the category

Technical data

Standards:	EN 60947-5-3, EN ISO 13849-1, IEC 61508
Enclosure:	glass fiber reinforced thermoplastic, self-extinguishing
Mechanical life:	≥ 1 million operations
Holding force:	30 N
Protection class:	IP67 to EN 60529
Protection class:	II, \square
Overvoltage category:	III
Degree of pollution:	3
Connection:	screw terminals or cage clamps or connector M12 or M23
Cable section:	min. 0.25 mm ² , max. 1.5 mm ² (incl. conductor ferrules)
Cable entry:	M20
Series-wiring:	max. 31 components
Cable length:	max. 200m (Cable length and cable section alter the voltage drop depending on the output current)
Switching distances to EN 60947-5-3:	
S _n :	6.5 mm
S _{ao} :	4.0 mm
S _{ar} :	30 mm
Hysteresis:	max. 1.5 mm
Repeat accuracy:	< 0.5 mm
Switching frequency f:	1 Hz
Ambient conditions:	
Ambient temperature:	-25 °C ... +70 °C
Storage and transport temperature:	-25 °C ... +85 °C
Relative humidity:	30% ... 95%, non-condensing
Resistance to vibration:	10 ... 55 Hz, amplitude 1 mm
Resistance to shock:	30 g / 11 ms
Switching frequency f:	1 Hz
Response time:	< 60 ms
Duration of risk:	< 120 ms
Time to readiness:	< 4 s
Actuating speed:	≤ 0.2 m/s

Technical data

Electrical data:

U _e :	24 VDC $-15\%/+10\%$ (stabilised PELV)
I _e :	0.7 A
I ₀ :	max. 0.1 A
U _{imp} :	800 V
U _i :	32 VDC
Fuse rating:	
- Screw terminals or cage clamps:	≤ 4 A when used to UL 508;
- Connector M12 or M23:	≤ 2 A
Safety inputs X1 and X2:	only for -1P2P and -SD2P
U _{e3/Low} :	- 3 V ... 5 V
U _{e3/High} :	15 V ... 30 V
I _{e3} :	typically 2 mA at 24 V
Safety outputs Y1 and Y2:	p-type, short-circuit proof
U _{e1} :	0 V up to 4 V under U _e
I _{e1} :	max. je 0.25 A
Utilization category:	DC-13
Leakage current I _r :	≤ 0.5 mA
Diagnostic output OUT:	p-type, short-circuit proof
U _{e2} :	0 V up to 4 V under U _e
I _{e2} :	max. 0.05 A
Utilization category:	DC-13
Wiring capacitance for serial diagnostic:	max. 50 nF
LED functions:	
Green:	Supply voltage on
Yellow:	Operating status
Red:	Error (refer to flash codes)
Classification:	
Standards:	EN ISO 13849-1; IEC 61508
PL:	e
Category:	4
PFH value:	4.0×10^{-9} /h
SIL:	suitable for SIL 3 applications
Mission time:	20 years

Further products and program extensions for guard door monitoring

SDG heavy duty keyed interlock

Similar to our AZ3350 designed for harsher industrial environments. The housing is a robust die cast aluminum with a larger wiring compartment, offering IP67 protection. The actuating head can be rotated into any of four positions (90 deg).

Further information can be found in the online product catalog

TKF/TKM heavy duty solenoid latching keyed interlock

The switch features separate actuator heads with independent contacts for a keyed interlock and a solenoid interlock. The heads can be aligned in series, or facing the side in parallel. The housing is a robust die cast aluminum which offers IP67 protection.

Available in power to unlock (TKF) and power to lock (TKM) versions.

Further information can be found in the online product catalog

SHGV cablefree guard door monitoring system

The SHGV trapped key system conforms to EN 1088 and is particularly suitable for the monitoring of maintenance and service doors.

The trapped key system consists of a keyed selector switch for the control panel and a mechanical interlock switch for the guard door which use the same lock key. This system eliminates wiring or cabling between the guard and the control cabinet.

Further info can be found in the online product catalog.

SVE key operated selector switch interlocking device

For use with the SHGV system in applications where hazardous movement may run longer than the time to reach the area and transfer the key. Used instead of the SHGV/ESS keyed selector switch.

The SVE allows up to three keys to power off the machine, but uses a solenoid to keep the keys trapped for the duration of machine rundown.

Further info can be found in the online product catalog.

SVM multiple key distribution station

For use with SHGV System. The selector switch key is used to free either 6 or 10 additional keys for multiple SHGV switch units. The selector switch key is trapped until all additional keys have been returned.

Available in a surface mounted aluminum housing or on a stainless steel plate for flush mounting.

Further info can be found in the online product catalog.

Safe switching and monitoring Solenoid Interlocks

Solenoid locking switches are used on sliding, hinged and removable guard doors that must be closed and locked for operator safety. It is a two part system consisting of a switch body, mounted to the guard frame, and a separate actuator key, mounted to the door.

Models are available in a several mounting profiles and housing materials. Each model has a variety of actuator key options: straight, right angle mounting, floating head, and keys integrated into door handle assemblies.

Solenoid interlocks

AZM 170 cut clamps

- **Cut clamps**
- Interlock with protection against incorrect locking
- Thermoplastic enclosure
- Compact design
- Manual release
- Long life
- Double insulated
- High holding force 1,000 N
- Power to unlock/power to lock principle
- 1 cable entry M20 cord grip

AZM 170 with connector

- **Connector**
- Interlock with protection against incorrect locking
- Thermoplastic enclosure
- Compact design
- Manual release
- Long life
- Double insulated
- High holding force 1,000 N
- Power to unlock/power to lock principle

AZM 170 screw terminals

- **Screw terminals**
- Interlock with protection against incorrect locking
- Thermoplastic enclosure
- Compact design
- Manual release
- Long life
- Double insulated
- High holding force 1,000 N
- Power to unlock/power to lock principle

Solenoid interlocks

Actuator AZM 170-B25

- Door-handle actuator for solenoid interlocks AZM 170-...ZRK (latching)
- Ergonomic operation
- No supplementary door-handle required
- No protruding actuator
- Simple mounting
- Several door-handles available
- Possibility to mount the own handles using a default square screw (8 mm)
- Mounting plate for fitting to standard profiles optionally available

System components

Mounting plate

Star grip

T-grip

Note

The safety switch or solenoid interlock is not included in delivery and must be ordered separately.

Please note that you need a device with latching (R).

The technical data of the AZM 170-...ZRK solenoid interlock can be found in the main catalog page 1-28 or in the online catalog at www.usa.schmersal.net

Note

At least one magnetic contact with positive break ⊖ must be integrated in the safety circuit.

Contact variants show de-energized condition with actuator inserted.

Note

Interlocks with power to lock principle may only be used in special cases after a thorough evaluation of the accident risk, since the guarding device can immediately be opened on failure of the electrical power supply or when the main switch is opened.

Note

The contacts with LED are shown in closed and locked condition.

Solenoid interlocks

AZM 161..-12/12...

- **Manual release**
- For manual release using M5 triangular key, available as accessory
- For maintenance, setting-up, etc.

AZM 161..-12/12...T

- **Emergency exit**
- For cases of danger
- Actuation from within the hazardous area

AZM 161..-12/12...N

- **Emergency release**
- For cases of danger
- Mounting only outside the guarded area

AZM 161..-12/12...E.

- **Manual release**
- For manual release using M5 triangular key, available as accessory
- For maintenance, setting-up, etc.
- Cover-side fitting (ordering suffix **ED**) or rear fitting (ordering suffix **EU**) enabled

AZM 161..-12/12...T.

- **Emergency exit**
- The emergency exit is used if an already locked dangerous area needs to be evacuated
- Emergency exit by pressing the red push-button
- Reset by pulling on the red push-button
- Cover-side fitting (ordering suffix **TD**) or rear fitting (ordering suffix **TU**) enabled

Note

Combining the manual release and the emergency exit in different mounting directions is only possible with the following combination:
ED/TU and TD/EU

Solenoid interlocks

AZM 415-...ZPK E

- **Manual release**
- Manual release by means of M5 triangular key
- M5 triangular key, available as accessory
- For maintenance, installation, etc.
- Only used on units with power to unlock principle

AZM 415-...ZPK F

- **Manual release**
- Release by means of M5 triangular key
- After removing the sealing screw, manual release can be carried out using a M5 triangular key
- M5 triangular key, available as accessory
- A chain secures the sealing plug against loss
- Only used on units with power to unlock principle

AZM 415-...ZPK FE

- **Manual release (cover-side fitting)**
- Release by means of M5 triangular key
- M5 triangular key, available as accessory
- Only used on units with power to unlock principle

AZM 415-...ZPK T

- **Emergency exit**
- Emergency exit is used where an „inadvertently locked-in“ person must leave a dangerous, already interlocked area
- Escape release by pressing the red push button
- Reset is carried out by pressing the latching pin
- In unlocked position the guard device is protected against unintended closing

AZM 415-...ZPK TE

- **Manual release**
- Release and resetting using M5 triangular key
- Emergency exit by pressing the red push button
- Resetting by pulling on the red latched button
- In unlocked position the guard device is protected against unintended closing
- Interlock mounting **outside**

AZM 415-...ZPK TEI

- **Manual release**
- Release and resetting using M5 triangular key
- Emergency exit by pressing the red push button
- Resetting by pulling on the red latched button
- In unlocked position the guard device is protected against unintended closing
- Interlock mounting **inside**

AZM 415-...XPK RS

- **Manual release**
- Release by means of cylinder lock
- Resetting can only be carried out by authorized personnel using key
- Only used on units with power to unlock principle
- In unlocked position the guard device is protected against unintended closing

AZM 415-...XPK NS

- **Emergency release**
- The emergency release is used where an intervention in an already locked hazardous area is required
- Release by pressing in the lock button
- Resetting can only be carried out by authorized personnel using key
- In unlocked position the guard device is protected against unintended closing

Note

The IP protection class depends on the type of release and is indicated by an X or Z in the ordering suffix.

Example:

Protection class IP54 AZM 415-11/11XPKNS
Protection class IP67 AZM 415-11/11ZPKF

Solenoid interlocks

AZM 415 for double doors

A: setting screw ball latch
E: manual release using triangular key

- Interlock with protection against incorrect locking for double doors
- Metal enclosure
- 3 switches in one enclosure
- Robust design
- Long life
- High holding force 2500 N per door
- Ball latch for each door, individually adjustable up to 400 N
- Manual release available
- Power to unlock/power to lock principle
- 2 cable entries M20 or connector M23 (only for 24 VAC/DC)
- Spring-loaded actuators

Approvals

Technical data

Standards: IEC/EN 60947-5-1
BG-GS-ET-19
Enclosure: light-alloy die-cast, enamel finish

Actuator and locking bolt: zinc-plated metal / aluminum
Protection class: IP67
Contact material: silver
Contact type: change-over contact with double break, type Zb, with galvanically separated contact bridges

Switching principle: \ominus IEC 60947-5-1 slow action, NC contact with positive break

Connection: screw terminals or connector M23

Cable section: min. 0.75 mm² max. 2.5 mm² (incl. conductor ferrules)

Cable entry: 2x M20

U_{imp}: 4 kV
U_i: 250 V

I_{the}: 6 A

Utilization category: AC-15

I_g/U_g: 4 A / 230 VAC

Max. fuse rating: 6 A gG D-fuse

Positive break travel: 4.5 mm

Positive break force: min. 15 N (depending on the setting of the ball latch)

Magnet: 100% ED

U_s: 24 VAC/DC

110 VAC, 50/60 Hz

230 VAC, 50/60 Hz

Power consumption: max. 10 W

Ambient temperature: -25 °C ... +50 °C

Actuating speed: max. 0.2 m/s

Switching frequency: max. 2.000 / h

Mechanical life: > 1 million operations

F_{max}: 2500 N (for each guard)

Holding force: 30 - 400 N (adjustable)

Classification:

Standards: EN ISO 13849-1

B_{10d} NC (NC): 2.000.000

Mission time: 20 years

$$MTTF_d = \frac{B_{10d}}{0,1 \times n_{op}} \quad n_{op} = \frac{d_{op} \times h_{op} \times 3600 \text{ s/h}}{t_{cycle}}$$

Contact variants

Power to unlock
3 NO
3 NC

Power to lock
3 NO
3 NC

Note

Actuators must be ordered separately (refer to page 1-50).

Note

Contact symbols shown for the closed condition of the guard device.

The contacts 11-12 and 13-14 are actuated when the solenoid A1-A2 is energized or de-energized.

At least one magnetic contact with positive break \ominus must be integrated in the safety circuit.

Interlocks with power to lock principle may only be used in special cases after a thorough evaluation of the accident risk, since the guarding device can immediately be opened on failure of the electrical power supply or when the main switch is opened.

- Actuator can be easily inserted or extracted

Centering device TFI

- **Mounting inside**
- Self-centering of the guard door
- End stop
- Suitable for all types of actuators
- Actuator can be easily inserted or extracted

Safe switching and monitoring

Electronic Solenoid and electromagnetic interlocks

Solenoid locking switches are used on sliding, hinged and removable guard doors that must be closed and locked for operator safety. It is a two part system consisting of a switch body, mounted to the guard frame, and a separate actuator key, mounted to the door.

These models feature an integrated electronic safety sensor to detect guard door closure independently of the solenoid lock. These sensors use non-contact operating principles (pulse echo or RFID) that limits wear on components, and tolerates misalignment. A micro-processor provides continuous internal function tests and monitors the safety outputs, meeting PLe to ISO13849-1 and SIL 3 to IEC61508, even when wired in series. Three color LEDs on the sensor indicate status, various errors, and misalignment. For more advanced indication these models are also available with serial diagnostics to connect to commercial field bus systems.

More detailed product information can be found in the Electronic Safety Sensors and Solenoid Interlocks catalog.

Solenoid interlock with door handle actuator	1-54

 SIL: suitable for SIL 3 applications
 Mission time: 20 years

The latching force of the MZM 100 B can be set in steps of approx. 10 N each within a range of approx. 30 N (factory setting) to approx. 100 N. To this end, the adjustment target MZM 100 TARGET is used directly on the fitted MZM 100 B.

Connection

Integrated connectors

Electronic Solenoid interlocks

Safety monitoring module

Interlocks with power to lock principle may only be used in special cases after a thorough evaluation of the accident risk, since the guarding device can immediately be opened on failure of the electrical power supply or when the main switch is opened.

Diagnostic

Depending on the component variant, the following diagnostic signals are transmitted:

MZM 100 ..-1P2PW variant:

OUT Combined diagnostic signal:
safety guard closed **and**
magnetic interlock locked

MZM 100 B ..-1P2PW2 variant:

OUT Combined diagnostic signal:
safety guard closed **and**
can be locked

Operating principle of the diagnostic output

The short-circuit proof diagnostic output OUT can be used for central indicating or control functions, for instance in a PLC.

The diagnostic output is not a safety-relevant output!

Serial diagnostic

Detailed information about the use of the serial diagnostics can be found in the operating instructions of the PROFIBUS-Gateway SD-I-DPV0-2 and the Universal-Gateway SD-I-U-... and in the instructions for the integration of the SD-Gateway.

Misalignment

Misalignment

Solenoid interlocks

Actuator MZM 100-B1.1

- The magnetic interlocks and the actuator unit must be ordered separately!
- Actuator free from play, i.e. neutralization of undesired noises

MZM 100 TARGET

- Adjustment target for variable adjustment of the latching force of the MZM 100
- Gradually adjustable by steps of approx. 10 N each within the range from approx. 30 N to 100 N
- The adjustment target must be ordered separately

Technical data

Standards: IEC 60947-5-3, IEC 60947-5-1, IEC 61508, EN ISO 13849-1

Enclosure: glass-fibre reinforced thermoplastic

Mode of operation: RFID

Actuator: AZ/AZM300-B1

Series-wiring: unlimited number of components, up to 200 M; max. 31 components for serial diagnosis

Connection: Integrated connector M12

- Integrated connector: M12, 8-pole, A-coded

Switching distances to IEC 60947-5-3:

Rates switching distance S_n : 2 mm

Assured switch-on point S_{so} : 1 mm

Assured switch-off point S_{sr} : 20 mm

Minimum distance between two sensors: 100 mm

Ambient conditions:

Ambient temperature T_u : 0 °C ... +60 °C

Storage and transport temperature: -10 °C ... +90 °C

Protection class: IP66 / IP67 to EN 60529; IP69K to DIN 40050-9

Mechanical Data:

Mechanical life \geq 1,000,000 operations

Clamping force 1,000 N

Latching force 25 N / 50 N

End stop: 5 kg guard door, 0.5 m/s \geq 50,000 operations

Actuator misalignment \leq 2

Emergency unlocking device (Y/N) No

Manual release (Y/N) Yes

Emergency release (Y/N) No

Resistance to vibration: 10...150 Hz, amplitude 0.35 mm

Resistance to shock: 30 g / 11 ms

Electrical data:

Switching frequency f : 0.5 Hz

Response time: 120 ms

Duration of risk: $<$ 200 ms

Standby delay: \leq 5 s

Rated Supply voltage U_s : 24 VDC -15% / +10% (PELV)

Power consumption with solenoid enabled: 0.25 A

Power consumption without load: 0.1 A

Required rated short-circuit current: 100 A

Electronic Solenoid interlocks

Technical data

Rated insulation voltage U_i : 32 V
 Rated impulse withstand voltage U_{imp} : 800 V
 No-load current I_0 : 35 mA
 Protection class: II
 Overvoltage category: III
 Degree of pollution: 3

Safety inputs X1/X2:

Rated operating voltage U_{e1} : 24 VDC -15% / +10% (PELV to IEC 60204-1)

Current consumption per input: 5 mA
Safety outputs Y1/Y2: p-type, short-circuit proof
 Rated operating current I_{e1} : max. 0.25 A

Utilization category: AC-12: U_e/I_e : 24V AC/0.25 A
 DC-13: U_e/I_e : 24V DC/0.25 A

Voltage drop: < 1 V

Diagnostic output: p-type, short-circuit proof

Rated operating current I_{e2} : max. 0.05 A
 Utilization category: AC-12: U_e/I_e : 24V AC/0.05 A
 DC-13: U_e/I_e : 24V DC/0.05 A

Voltage drop: < 2 V

Serial diagnostic: short-circuit proof
 Operating current: 150 mA

Wiring capacitance for serial diagnostic: max. 50 nF

External cable protection: Fuse

- Integrated connector: 2.0 A

- Connecting cable: 4.0 A

Please observe the cable section of the lead-on cable

Safe switching and monitoring

Non-Contact Safety Sensors

Electronic safety sensors are used to detect guard door closure. These sensors use non-contact operating principles (pulse echo or RFID) that limits wear on components, and tolerates misalignment. A microprocessor provides continuous internal function tests and monitors the safety outputs, meeting PLe to ISO13849-1 and SIL 3 to IEC61508, even when wired in series. Three color LEDs on the sensor indicate status, various errors, and misalignment. For more advanced indication these models are also available with serial diagnostics to connect to commercial field bus systems.

Magnetic safety sensors are of particular advantage in cases where extremely dirty conditions can occur or high hygienic standards need to be maintained. This is provided by the simplicity of cleaning the units.

A further advantage is the facility for concealed mounting under non-magnetic materials. Working surfaces and storage areas can be arranged without the need for dust-collecting edges or other functionally required cut-outs or projections.

These switches are available in a variety of profiles and housing materials, including IP69K rated models.

obtained from the following pages.

Electronic safety sensors

Sensor RSS 36

- Thermoplastic enclosure
- 2 short-circuit proof, p-type safety outputs (24 VDC per 250 mA)
- Increased protection against tampering by optional individual coding of safety sensor and actuator
- Optional version with latching available
- Safety and diagnostic signals can be wired in series
- Integral cross-wire, wire breakage and external voltage monitoring of the safety cables up to the control cabinet
- LED status indication
- Sensor with connecting cable or with integrated connector
- Robust due to the used cleaning agent-resistant materials and protection class up to IP69K
- AS-Interface Safety at Work available

Actuator RST 36-1

- Thermoplastic enclosure
- Flexible fitting through universal mounting holes

Technical data

Standards: IEC 60947-5-3, IEC 61508, EN ISO 13849-1
 Enclosure: glass fiber reinforced thermoplastic
 Mode of operation: RFID
 Actuator: RST 36-1, RST 36-1-R
Series-wiring: unlimited number of components, however safety-dependent; max. 31 components for serial diagnosis
 Connection: Integrated connector M12 or connecting cable
 - Integrated connector: M12, 8-pole, A-coded
 - Connecting cable: Y-UL 2517 / 8 x AWG 22 / 8 x 0.35 mm², 2 m
 Temperature resistance of the cable:
 - At rest: -30 °C ... +105 °C
 - In movement: -10 °C ... +105 °C
 Cable length: max. 30 m
 (Cable length and cable section alter the voltage drop depending on the output current)

Switching distances to IEC 60947-5-3:

Rates switching distance S_n : 12 mm
 Assured switch-on point S_{a0} : 10 mm
 Assured switch-off point S_{a1} : 16 mm
 Hysteresis: < 2.0 mm
 Repeat accuracy: < 0.5 mm
 Minimum distance between two sensors: 100 mm

Ambient conditions:

Ambient temperature T_u : -25 °C ... +70 °C
 Storage and transport temperature: -25 °C ... +85 °C
 Protection class: IP65 / IP67 to EN 60529;
 - Connector: IP69K to DIN 40050-9
 Resistance to vibration: 10...55 Hz, amplitude 1 mm
 Resistance to shock: 30 g / 11 ms
 Switching frequency f : 1 Hz
 Response time: ≤ 100 ms
 Duration of risk: ≤ 200 ms
 Standby delay: ≤ 5 s

Electrical data:

Rated operating voltage U_e : 24 VDC -15% / +10% (PELV)
 Rated operating current I_e : 0.6 A
 Lowest operating current I_m : 0.5 mA
 Required rated short-circuit current: 100 A

 SIL: suitable for SIL 3 applications
 Mission time: 20 years

Misalignment

Lateral actuation

The axial misalignment (Y) is max. ± 18 mm.
 The height misalignment (X) is max. ± 8 mm.

Latching versions $X \pm 5$ mm, $Y \pm 3$ mm.
 The latching force is reduced by misalignment.

Actuating curves

The actuating curves (S) represent the typical switching distance of the safety sensor during the approach of the actuator subject to the actuating direction.

Transverse misalignment

Height misalignment

Preferred actuating directions:
 from front or from side

System components

Sealing kit

Note

Requirements for the safety controller
 Dual-channel safety input, suitable for p-type sensors with normally-open (NO) function. The internal function tests of the sensors cause the outputs to cyclically switch off for max. 0.25 ms, this must be tolerated by the safety controller. The safety controller must not be equipped with cross-wire detection. Detailed information about the use of the serial diagnostics can be found in the operating instructions of the PROFIBUS-Gateway SD-I-DPV0-2 and the Universal-Gateway SD-I-U-... and in the instructions for the integration of the SD-Gateway.

Coding procedure

Ordering option -I1:
 During the individual coding, a RST actuator is taught by a simple routine during the start-up procedure, so that every form of tampering by means of a replacement or substitute actuator is permanently excluded.

Ordering option -I2:
 Teaching the individual coding of a RST actuator by a simple routine during the start-up procedure (as -I1). A protected coding process enables the teaching of a new actuator for service purposes.

Ordering details

Sealing kit ACC RSS 36-SK **101215048**
 for sealing the mounting holes and as spacer (approx. 3 mm) to facilitate the cleaning below the mounting surface (also suitable as tampering protection for the screw fastening)

Electronic safety sensors

Sensor CSS 16

- Thermoplastic enclosure
- Electronic, non-contact, coded system
- Large switching distance
- Misaligned actuation possible
- High repeat accuracy of the switching points
- Self-monitored series-wiring of max. 16 sensors
- Max. length of the sensor chain 200 m
- Comfortable diagnose through sensor LED and diagnostic output
- Early warning when operating near the limit of the sensor's hysteresis range
- 2 short-circuit proof, p-type safety outputs (24 VDC per 500 mA)

Actuator CST 16-1

- Thermoplastic enclosure

Technical data

Standards: IEC 60947-5-3, EN ISO 13849-1, IEC 61508

Enclosure: glass fiber reinforced thermoplastic

Mode of operation: inductive

Actuator: CST 16-1

Switching distances to IEC 60947-5-3:

Rates switching distance S_n : 8 mm

Assured switch-on distance S_{ao} : 6 mm

Assured switch-off distance S_{ar} : 11 mm

Hysteresis: max. 1.0 mm

Repeat accuracy R: < 0.5 mm

Switching frequency f: 3 Hz

Series-wiring: max. 16 components

Cable length: max. 200 m
(Cable length and cable section alter the voltage drop depending on the output current)

Connection: cable or cable with connector M12

Cable: PVC / LIYY / UL-Style Y-UL 2464 / 2 m

Cable section: according to execution:
4 x 0.5 mm², 5 x 0.34 mm², 7 x 0.25 mm²

Ambient conditions:

Ambient temperature T_a :
for output current

Note

Requirements for the safety controller

Dual-channel p-type safety input. The internal function tests of the sensors cause the outputs to cyclically switch off for max. 2 ms, this must be tolerated by the safety controller.

Additional Accessories:

SD Gateway Page 1-90
 Series-wiring accessories Page 1-92
 Connector Page 1-89
 Diagnostic tables Online
 Suitable safety monitoring modules Page 5-2

Note

- Series-wiring of sensors:
 A chain of 16 self-monitored CSS 16 safety sensors can be wired in series without loss of PL e or category 4 to EN ISO 13849-1. In this configuration, the redundant output of the first sensor is wired to the input of the next sensor.
- The voltage drop over a long sensor chain should be taken into account when planning cable routing. It depends on several factors, which are operating voltage, cable length and section, ambient temperature, number of series-wired sensors and the input load of the safety controller.

Electronic safety sensors

Sensor CSS 30

- Metal enclosure M30
- 2 short-circuit proof, p-type safety outputs (24 VDC per 500 mA)
- Self-monitored series-wiring of max. 16 sensors for PLe and category 4 to EN ISO 13849-1
- Max. length of the sensor chain 200 m
- Integral cross-wire, wire breakage and external voltage monitoring of the safety outputs

Misalignment

Sideways actuation

The long side allows for a max. height misalignment (X) of sensor and actuator of 36 mm (e.g. mounting tolerance or due to guard door sagging).

Increased misalignment, max. 53 mm, possible when the CST 34-S-2 actuator is used. The axial misalignment (Y) is max. ± 10 mm.

Head actuation

The front side allows for a maximum transverse misalignment (Z) of approx. 8 mm.

①	1 ... 20	Coding 1-20

Technical data

Standards: IEC 60947-5-3, EN ISO 13849-1, IEC 61508

Enclosure: glass fiber reinforced thermoplastic

Mode of operation: inductive

Actuator: coded CSP 34-S-1

Series-wiring: max. 31 components

Cable length: max. 200 m

Switching distances to IEC 60947-5-3:

Rates switching distance S_{ri} : 11 mm

Assured switch-on distance S_{ao} : 8 mm

Assured switch-off distance S_{ar} : 15 mm

Hysteresis: max. 1.5 mm

Repeat accuracy: < 0.5 mm

Switching frequency f: 3 Hz

Integrated connector: M12, 8-pole in the enclosure

Ambient conditions:

Ambient temperature T_u :

For output current

≤ 0.1 A/output -25 °C ... +70 °C

≤ 0.25 A/output -25 °C ... +65 °C

Storage and transport temperature: -25 °C ... +85 °C

Resistance to vibration: 10...55 Hz, amplitude 1 mm

Resistance to shock: 30 g / 11 ms

Protection class: IP65, IP67 to EN 60529

Electrical data:

Rated operating voltage U_o : 24 VDC
-15% / +10%
(stabilised PELV)

Rated operating current I_o : 0.6 A

Required rated short-circuit current: 100 A

Fuse: 2.0 A

Rated insulation voltage U_i : 32 V

Rated impulse withstand voltage U_{imp} : 800 V

No-load current I_0 : 0.1 A

Response time: < 30 ms

Duration of risk: < 60 ms

Protection class: II

Overvoltage category: III

Degree of pollution: 3

Note

Requirements for the safety controller

Dual-channel safety input, suitable for p-type sensors with normally-open (NO) function. The internal function tests of the sensors cause the outputs to cyclically switch off for max. 0.5 ms, this must be tolerated by the safety controller. The safety controller must not be equipped with cross-wire detection.

Electronic safety sensors

Technical data

Safety inputs X1/X2:
 Rated operating voltage U_e : 24 VDC
 -15% / +10%
 PELV gem. IEC 60204-1
 Rated operating current I_e : 1 A

Safety outputs Y1/Y2: NO function, 2-channel,
 p-type, short-circuit proof

Utilization category: DC-12, DC-13
 Rated operating voltage U_{e1} : min. ($U_e - 1$ V)
 Voltage drop: < 1 V
 Rated operating current I_{e1} : max. 0.25 A,
 ambient temperature-dependent

Leakage current I_l : < 0.5 mA
 Minimum operating current I_m : 0.5 mA

Diagnostic output: p-type, short-circuit proof
 Utilization category: DC-12, DC-13
 Rated operating voltage U_{e2} : min. ($U_e - 5$ V)
 Voltage drop: < 5 V
 Rated operating current I_{e2} : max. 0.05 A

Classification:
 Standards: EN ISO 13849-1, IEC 61508
 PL: e
 Category: 4
 PFH value: $1,3 \times 10^{-10}$ /h
 SIL: suitable for SIL 3 applications
 Mission time: 20 years

Note

Coding of safety sensor and actuator
 In order to activate the safety function (coding) of the CSP 34 for the first time, the actuator to be assigned first must be brought into the detection area of the activated safety sensor. The automatic teaching cycle of the actuator code will be signalled by the red LED on the safety sensor being activated and the yellow LED simultaneously flashing. After 10 seconds, brief cyclic flashing signals signal that the operating voltage of the safety sensor must be shut off for a few seconds, in order to save the code. When the operating voltage is switched back on, the actuator must be redetected in order to definitively assign safety sensor and actuator. Now, the safety sensor no longer can be activated by another coding. In order to protect the coding, the ordering details of the actuator are hidden by the mounting bracket.

On-site acknowledgment (ordering suffix F2)
 For the guard door monitoring using a CSP 34F2 safety sensor, a reset/acknowledgment button for instance must be positioned at the safety guard in such manner that the operator has an overview of the hazardous area. When the button is pushed, a 24 VDC signal is generated at the reset input of the CSP 34F2. When the safety guard is closed, the safety outputs are enabled with the trailing edge of the reset signal. After opening of the safety guard, a new acknowledgment is required prior to the next enabling.

Misalignment

Actuation through the revolving side of sensor and actuator

The actuating curves show the switch-on and switch-off distances of the CSP 34 sensor by the approach of the actuator.

- Legend**
- S Switching distance
 - X Possible misalignment through the long side with identification plate
 - Y Possible misalignment through the small side with identification plate
 - S_{on} Switch-on distance
 - S_{off} Switch-off distance
 - S_h Hysteresis area $s_h = s_{on} - s_{off}$
 - S_{ao} Assured switch-on distance
 - S_{ar} Assured switch-off distance

Note

Misalignment

The long side allows for a max. displacement of sensor and actuator of 30 mm (e.g. mounting tolerance or due to guard door sagging). The long side allows for a maximum transverse misalignment of approx. 8 mm.

Electronic safety sensors

CSS 180

- **Connecting cable or connecting cable and connector**
- Thermoplastic enclosure
- Electronic, non-contact, coded system
- Large switching distance
- Misaligned actuation possible
- High repeat accuracy of the switching points
- Self-monitored series-wiring of max. 16 sensors
- Max. length of the sensor chain 200 m
- Comfortable diagnose through sensor LED and diagnostic output
- Early warning when operating near the limit of the sensor's hysteresis range
- 2 short-circuit proof, p-type safety outputs (24 VDC per 500 mA)
- EX version available

CSS 180 ST

- **Integrated connector**
- Multifunction device

Ordering details

Requirements for the safety controller
 Dual-channel p-type safety input. The internal function tests of the sensors cause the outputs to cyclically switch off for max. 2 ms, this must be tolerated by the safety controller.

Additional Accessories:
 Series-wiring accessories Page 1-92
 Connector Page 1-89
 Diagnostic tables Online
 Suitable safety monitoring modules Page 5-2

Note

- Series-wiring of sensors:
 A chain of 16 self-monitored CSS 180 safety sensors can be wired in series without loss of PL e and category 4 to EN ISO 13849-1. In this configuration, the redundant output of the first sensor is wired into the input of the next sensor.
- The voltage drop over a long sensor chain should be taken into account when planning cable routing. It depends on several factors, which are operating voltage, cable length and section, ambient temperature, number of series-wired sensors and the input load of the safety controller.

SD-I-DP-V0-2

- **PROFIBUS-Gateway** for the series-wiring of the diagnostic signals of safety switchgear with integrated SD interface. The status and diagnostic information of the SD devices is transmitted to the control system through the PROFIBUS DP-V0 interface.
- Diagnostic lines of max. 31 safety switching components can be wired in series
- Series-wiring of different components enabled (CSS 34, RSS 36, AZM 200, MZM 100 etc.)
- Reduced wiring expenditure through the series-wiring of the safety channels and the diagnostic lines in the field
- Automatic addressing of the safety switching components in the SD interface
- IP10 component for quick-fix mounting onto standard DIN rails in the control cabinet

Technical data

PROFIBUS interface:	9-pole D-SUB connector standard PROFIBUS connection (DP-A, DP-B, 5V, GND)
Protocol:	PROFIBUS-DP -V0 upwards compatible
Transmission rate:	9.6 kilo baud ... 12 mega baud
GSD file:	KAS_0b13.GSD
Short-circuit protection:	internal fuse to EN 60127 PolySwitch 0.5 A / 60 V
LED indications:	refer to table below
DIP-switch 8-pole:	S1 ... S7: addressing as PROFIBUS slave; S8: automatic addressing of the serial participants
Rated operating voltage U_e :	24 VDC, -15 % / +20 %
Rated operating current I_e :	typically 180 mA, max. 250 mA
Rated insulation voltage U_i :	32 V
Rated impulse withstand voltage U :	0.5 kV
Overvoltage category:	II
Degree of pollution:	2
Storage temperature range:	-25 °C ... +85 °C, non-condensing
Operating temperature range:	-5 °C ... +55 °C, non-condensing
Relative humidity:	5% - 95%, non-condensing
Protection class:	IP10
Resistance to vibration:	5 ... 9 Hz / 3.5 mm (to IEC 60068-2-6) 9 ... 150 Hz / 1 g
Resistance to shock:	15 g / 11 ms (to IEC 60068-2-27)
EMC rating:	to EN 61000-4-2 (ESD): 4 kV / 8 kV to EN 61000-4-3: 10 V/m / 80% AM to EN 61000-4-4 (burst): 2 kV DC supply / 1 kV PROFIBUS & SD-Interface to EN 61000-4-5 (surge): 500 V DC supply / 1 kV PROFIBUS & SD-Interface to EN 61000-4-6: 10 V / 80 % AM
EMC interfering radiation:	to EN 61000-6-4 (2002)
Industrial interfering radiation:	37 dBIV/m
Electrical connection:	- SD: connection for max. 31 devices in the serial diagnostic - 24 V: + 24 VDC voltage supply - 0 V: GND of the voltage supply and GND of the diagnostic cable and 24 VDC supply, approx. 300 mA, PELV power supply

T-adapter CSS-T

- Enables the series-wiring of safety sensors. To this end, both the safety channels and the serial diagnostic cable are wired in series.
- For the wiring, M12 cable extensions can be used. The voltage drop (due to the cable length, cable section, voltage drop per sensor) should be taken into account, as it reduces the maximum number of safety sensors that can be wired in series.

Terminal connector

- Supplies the safety channels with operating voltage

Technical data

Rated operating voltage of the SD devices to be connected: **24 V (-15%/+10%)**
 Rated operating current of the SD devices to be connected: **0.6 A**
 Fuse of the connecting cables (circuit breaker): **2 A**
 Ambient temperature T_{a} : **-25 °C ... +70 °C**

Y-adapter CSS-Y-8P

- Enables the series-wiring of sensors and solenoid interlocks with SD interface. To that effect, both the safety channels and the serial diagnostic lines are wired in series.
- For the wiring, M12 cable extensions can be used. The voltage drop (due to the cable length, cable section, voltage drop per sensor) should be taken into account, as it reduces the maximum number of safety sensors and interlocks with SD interface that can be wired in series.

Terminal connector

- Supplies the safety channels with operating voltage
- Leads the SD interface back to the control cabinet to connect further SD participants of other safety circuits

Technical data

Rated operating voltage of the SD devices: **24 VDC (-15%/+10%)**
 Rated operating voltage of the adapter: **30 VDC**
 Max. operating current of the device to be connected: **1 A**
 Fuse of the connecting cables (circuit breaker): **4 A**
 Ambient temperature T_U : **-25 °C ... +75 °C**

SD-2V-F-SK

- For field applications, junction box for 2 components, with screw terminals
- The terminals of the junction box are located in a closed enclosure

SD-2V-S-SK

- For control cabinet mounting, junction box for 2 components, with screw terminals
- Enables wiring in the control cabinet onto standard DIN rails

Technical data

Standards:	VDE 0100
Enclosure:	thermoplastic, self-extinguishing
Protection class:	SD-2V-F-SK: IP65 SD-2V-S-SK: IP00 to EN 60529
Insulation protection class:	SD-2V-F-SK: II, III SD-2V-S-SK: II
Overvoltage category:	III
Degree of pollution:	SD-2V-F-SK: 3 SD-2V-S-SK: 2
Connection:	Screw terminals
Cable section:	min. 0.25 mm ² , max. 2.5 mm ² (incl. conductor ferrules)
Cable entry:	SD-2V-F-SK: 4 x M20, for cladding diameter 8 ... 13 mm
Number of connections:	to each SD junction box, 2 (optionally 3) components can be connected
Fuse rating:	3 internal fine fuses, 2 A slow blow, 5 x 20
Ambient conditions:	
Ambient temperature:	-25 °C ... +70 °C
Storage and transport temperature:	-25 °C ... +85 °C
Relative air humidity:	30% ... 95%, non-condensing
Electrical data:	
Rated operating voltage U _e :	24 VDC -15% / +10% (stabilised PELV)
Rated operating current I _e :	16 A
Rated impulse withstand voltage U _{imp} :	800 V
Rated insulation voltage U _i :	32 VDC
Fuse rating:	16 A

Coded magnet safety sensors

BNS 260

- Thermoplastic enclosure
- Coded
- Actuation only possible with BPS 260
- Small design
- Long life, no mechanical wear
- Protection class IP67
- Insensitive to lateral misalignment
- Concealed mounting possible
- Insensitive to soiling
- AS-Interface Safety at Work available

Technical data

Standards: IEC 60947-5-3, BG-GS-ET-14
 Design: rectangular
 Enclosure: glass fiber reinforced thermoplastic
 Protection class: IP67 to EN 60529
 Connection: Boflex cable or connector M8
 Cable section of cable: 4 x 0.25 mm²
 - with signalling contact: 6 x 0.25 mm²
 Cable section of connector: M8, 4-pole
 - with signalling contact: M8, 6-pole
 Mode of operation: magnetic
 Actuating magnet: BPS 260, coded
 S_{ao}: 5 mm
 S_{ar}: 15 mm
 Switching conditions indicator: LED only for ordering suffix G

Switching voltage
 - without LED: max. 75 VDC
 - with LED: max. 24 VDC
 - with connector, 6 poles: max. 30 VDC
 Switching current
 - without LED: max. 400 mA
 - with LED: max. 10 mA
 Switching capacity
 - without LED: max. 10 VA
 - with LED: max. 240 mW
 Signalling contact: S31-S32
 Safety contacts: S21-S22; S11-S12 bzw. S13-S14
 Ambient temperature: -25 °C ... +70 °C
 Storage and transport temperature: -25 °C ... +70 °C
 Switching frequency: max. 5 Hz
 Resistance to shock: 30 g / 11 ms
 Resistance to vibration: 10 ... 55Hz, amplitude 1 mm

Classification:

Standards: EN ISO 13849-1
 B_{10d} (NC/NO): 25.000.000 for 20% contact load
 Mission time: 20 years

$$MTTF_d = \frac{B_{10d}}{0,1 \times n_{op}} \quad n_{op} = \frac{d_{op} \times h_{op} \times 3600 \text{ s/h}}{t_{cycle}}$$

Coded magnet safety sensors

BNS 40S

- Fully encapsulated stainless steel enclosure
- Coded
- Rectangular design
- Long life, no mechanical wear
- Protection class IP69K
- Actuation only possible with BPS 40S-...
- Insensitive to lateral misalignment
- Concealed mounting possible
- Insensitive to soiling
- Suitable for food-processing industry
- Food-safe connecting cable

BNS 40S-...-C

- Concealed threaded holes on the rear-side provide for smooth cleaning

Technical data

Standards:	IEC 60947-5-3, BG-GS-ET-14
Design:	rectangular
Enclosure:	Stainless steel V4A (Material designation to DIN 1.3960)
Protection class:	IP69K to IEC/EN 60529
Connection:	cable LiYY, 1 m (suitable for the food industry)
Cable section:	6 x 0.25 mm ²

Coded magnet safety sensors

BNS 300

- With integral evaluation
- Thermoplastic enclosure
- Coded
- Long life, no mechanical wear
- Protection class IP67
- Insensitive to lateral misalignment
- Concealed mounting possible
- Insensitive to soiling
- With LED
- With actuator BPS 303 SS suitable for food processing industry

Technical data

Standards: IEC 60947-5-3, BG-GS-ET-14
 Design: cylindrical
 Enclosure: glass fiber reinforced thermoplastic, 2 nuts thermoplastic, tightening force A/F 36: max. 300 Ncm
 Protection class: IP67 to EN 60529
 Connection: Boflex cable, connector M12
 - Ordering suffix -ST:
 Cable section: 4 x 0.75 mm²
 Mode of operation: magnetic
 Actuating magnet: BPS 300, BPS 303, BPS 303 SS, coded
 S_{ao}: 5 mm
 - Ordering suffix -2211: 8 mm
 S_{ar}: 15 mm
 - Ordering suffix -2212: 18 mm
 Switching conditions indicator: LED
 Switching voltage: max. 250 VAC
 Switching current: max. 3 A
 Switching capacity: max. 750 W
 Output: 1 enabling circuit
 U_e: 24 VDC
 I_e: 30 mA
 Ambient temperature: -25 °C ... +55 °C
 Storage and transport temperature: -25 °C ... +70 °C
 Switching frequency: max. 5 Hz
 Resistance to shock: 30 g / 11 ms
 Resistance to vibration: 10 ... 55Hz, amplitude 1 mm

Classification:
 Standards: EN ISO 13849-1
 B_{10d} (NC/NO): 20.000.000 for 20% contact load
 Mission time: 20 years

$$MTTF_d = \frac{B_{10d}}{0,1 \times n_{op}} \quad n_{op} = \frac{d_{op} \times h_{op} \times 3600 \text{ s/h}}{t_{cycle}}$$

The LED is illuminated when the guard door is closed.

Important Note:
 The BNS30 is a 4-wire sensor designed to satisfy PLC per EN ISO 13849-1, or control Category 1 per EN 954-1. They are not designed for use with a separate safety controller.

The actuating magnet must be ordered separately. Refer to page 1-110.

Coded magnet safety sensors

System components

BPS 300

BPS 303

BPS 303 SS

Ordering details

Actuating magnet:

thermoplastic enclosure **BPS 300**

For food processing industry rear mounted:

thermoplastic enclosure **BPS 303**

stainless steel enclosure **BPS 303 SS**

Coded magnet safety sensors

BNS-B20

- Thermoplastic enclosure
- Non-contact safety switch
- No protruding actuator, no risk of injury
- Does not protrude into the door opening
- Substitutes door-handle and safety switch, no further door fittings required
- Modern and symmetric design
- Fitted with four screws only
- Latching force of approx. 100 N
- Tamper-proof because of integral coded safety sensor
- LED indication
- Ergonomic operation
- Suitable for hinged and sliding guards
- AS-Interface Safety at Work available

(1) WH S21 — S22 BN (2)

Important Note:

Series BNS sensors are only for use in safety applications when used with an electrically compatible safety controller or safety PLC (See section 5 for appropriate safety controllers)

Note

The safety sensor and the actuator must be ordered separately.

Inductive loads (e.g. contactors, relays, etc.) are to be suppressed by means of a suitable circuit.

The BNS-B20 can be connected to:

- safety monitoring relays with NO/NC inputs, the remaining NC contact can be used as signalling contact
- safety monitoring relays with NC/NC inputs, the remaining NO contact can be used as signalling contact.

Note

Contact S21-S22 must always be integrated in the safety circuit.

Contact symbols shown for the closed condition of the guard device.

The contact configuration for versions with or without LED is identical.

The LED is illuminated when the guard door is closed.

Safe signalling and monitoring

Safety rated limit switches and Safety switches for hinged guards

Position or limit switches are used with movable machine guards or detect the presence of materials. These switches feature positive break contacts which make them suitable for safety applications.

Position Switches

1-112

Hinged switches are used to monitor the position of hinged safety guards. They prevent machine operation while the door is ajar.

Hinged Switches

1-116

Position switches

Z/T 235

- Metal enclosure
- Available with 2 positive break NC contacts
- Snap action with constant contact pressure up to switching point
- Slow action available with overlapping or staggered contacts
- Wiring compartment
- 1 cable entry M20
- Wide range of alternative actuators
- Actuator heads can be repositioned by 4 x 90°
- Angle of roller lever adjustable in 10° steps
- Good resistance to oil and petroleum spirit
- Metal roller available on request
- EX version available
- AS-Interface Safety at Work available

Z/T 236

- Thermoplastic enclosure
- Double insulated □
- Available with 2 positive break NC contacts
- Snap action with constant contact pressure up to switching point
- Slow action available with overlapping or staggered contacts
- 1 cable entry M20
- Wide range of alternative actuators
- Actuator heads can be repositioned by 4 x 90°
- Angle of roller lever adjustable in 10° steps

Position switches

Plunger / Lever options

Plunger S

- Actuator type B to EN 50041
- Required actuating force:
12 N for snap action,
17 N for slow action
- Actuating speed with actuating angle 0° to switch axis, max. 0.5 m/s

Roller plunger R

- Actuator type C to EN 50041
- Required actuating force:
12 N for snap action,
17 N for slow action
- Actuating speed with actuating angle 30° to switch axis: max. 0.5 m/s

Offset roller lever 1K

- Required actuating force:
12 N for snap action,
17 N for slow action
- Actuating speed with actuating angle 30° to switch axis: max. 0.5 m/s

Angle roller lever 3K

- Required actuating force:
12 N for snap action,
17 N for slow action
- Actuating speed with actuating angle 30° to switch axis: max. 0.5 m/s
- Actuation parallel to axis of switch from below

Roller lever H

- Actuator type A to EN 50041
 - Required actuating torque:
26 Ncm for snap action,
31 Ncm for slow action
 - Actuating speed with actuating angle 30° to switch axis: max. 2.5 m/s
- On version TVH ...-01/01z positive break only to one side.

Rod Lever 10H

- **Only for positioning tasks**
- Actuator type D to EN 50041
- Plastic rod
- Required actuating torque:
26 Ncm for snap action,
31 Ncm for slow action
- Actuating speed with actuating angle 30° to switch axis: max. 2.5 m/s
- Aluminum rod, ordering suffix -1183

Roller lever 7H

- **Only for positioning tasks**
- Required actuating torque:
26 Ncm for snap action,
31 Ncm for slow action
- Actuating speed with actuating angle 30° to switch axis: max. 2.5 m/s

Roller lever 7H-2138

- For safety tasks ⊕, positive break
 - Required actuating torque:
26 Ncm for snap action,
31 Ncm for slow action
 - Actuating speed with actuating angle 30° to switch axis: max. 2.5 m/s
- On version TV7H ...-01/01z-2138 positive break only to one side.

Note

LED version
Ordering suffix G24, Protected against incorrect polarity and voltage spikes.

Safety switch for hinged guards

T.C 235

- Metal enclosure
- Versions available for left-hand (T3C 235), right-hand (T5C 235) and swing-doors (T4C 235)
- 1 cable entry M20
- Good resistance to oil and petroleum spirit
- Actuator heads can be repositioned in steps 4 x 90°
- Opening angle 180°
- Stainless steel actuator
- EX version available

T.C 236

- Thermoplastic enclosure
- Versions available for left-hand (T3C 236), right-hand (T5C 236) and swing-doors (T4C 236)
- Double insulated \square
- 1 cable entry M20
- Good resistance to oil and petroleum spirit
- Actuator heads can be repositioned in steps 4 x 90°
- Opening angle 180°
- Stainless steel actuator

Note

LED version:

Ordering suffix G24, only available for version with one NO and one NC contact.
Protected against incorrect polarity and voltage spikes.

Note

Closed guard device = 0° in contact switch travel diagrams. This is the rest position of switch.

Caution! The versions with connector may only be used in PELV circuits to EN 60204-1.

- Setting assistance: Grub screw for location, shaft pre-drilled for pin
- Universal joint available to compensate for axial displacement (only for shaft bore 10 mm), see the following pages 1-127.

Safety switch for hinged guards

TESZ

- Thermoplastic enclosure
- Double insulated □
- Simple mounting, especially on 40 mm profiles
- Good resistance to oil and petroleum spirit
- 2 cable entries M20
- For left or right hinged doors
- Fixing holes for M6 countersunk screws to DIN 965
- The additional hinge including mounting accessories is also available separately,

Technical data

Standards: IEC/EN 60947-5-1
BG-GS-ET-15

Enclosure: glass fiber reinforced thermoplastic, self-extinguishing

Hinge: aluminum

Protection class: IP65 to EN 60529

Contact material: silver

Contact type: change-over contact with double break, type Zb or 3 NC contacts

Switching principle: ⊖ IEC 60947-5-1
slow action,
NC contact with positive break

Connection: screw terminals

Cable section: max. 1 mm² (incl. conductor ferrules)

Cable entry: 2 x M20

U_{imp}: 2.5 kV

U_i: 250 V

I_{the}: 2.5 A

Safety switch for hinged guards

TESF

- Metal enclosure
- Adjustable switching angle
- Opening angle 180°
- Mountable on the inside and the outside of the safety guard
- Screw terminals, cage clamps or connector
- Simple mounting, for all common profile systems (30 ... 60 mm)
- Oil and petroleum resistant
- 2 cable entries M16
- For left or right hinged doors

Technical data

Standards: IEC/EN 60947-5-1
BG-GS-ET-15

Enclosure: light-alloy diecast

Protection class: IP65 to EN 60529

Contact material: AgNi10

Contact type: 2x change-over contact with double break, type Zb

Switching principle: ⊖ IEC 60947-5-1 slow action, NC contact with positive break screw terminals or cage clamps

Connection: or connector

Cable section: max. 1 mm² (incl. conductor ferrules)

Cable entry: 2 x M16

Online Product Catalog

www.usa.schmersal.net

Images available online

Every part number page has an **Image** tab where you can view or download JPG or EPS images of the product, dimensional drawings, switch travel diagrams, or contact diagrams.

The **CAD** tab also has links to download CAD drawings of the part in many popular program formats, so they can be directly incorporated into CAD systems designs.

Safe switching and monitoring

Command devices with safety function

The control devices of the Schmersal Group always ensure a safe and reliable transmission of the operator's commands, regardless if safe stopping from dangerous movements or start-up of critical machine functions are concerned.

Apart from many special constructive features, these devices have a long life and an intelligent ergonomic construction.

BDF control panel

BDF 100 ...-NH

- **Yellow enclosure cover**
- Slim, shock-resistant plastic enclosure
- Can be fitted onto customary aluminum profile systems
- Can be installed in the most favorable ergonomic position
- Emergency stop function with or without protective collar
- Two-layer plastic identification labels can be used (engravements on request)

BDF 100

- **Black enclosure cover**
- Comprehensive selection of illuminated pushbuttons, selector switches, signalling devices with LED and key-operated switches
- Start/stop and reset functions available

Technical data

Standards:	EN 60947-5-1, EN 60947-5-5
Enclosure:	
Enclosure material:	glass fiber reinforced thermoplastic, self-extinguishing
Enclosure protection class:	IP65
Connection:	connector M12, 8-pole
Ambient conditions:	
Ambient temperature:	-25 °C ... +65 °C
Climatic resistance:	to DIN EN 60068, Part 2 - 30
Overvoltage category:	III
Degree of pollution:	3
Contact elements:	
Contact material:	AgNi 10, gold-plated
Control elements - protection class:	IP65
Rated operating voltage U_r :	max. 24 V
Utilization category:	AC-15/DC-13
Rated operating current/voltage I_e/U_e :	AC-15: 2 A / 24 VAC DC-13: 1 A / 24 VDC
Thermal test current I_{the} :	2 A
Fuse rating:	2 A slow-blow
Contact system:	cross-point system
Contact force:	0.5 N per contact point = 1 N per contact
Switching of low voltages:	min. 5 V / 1 mA
Switching frequency:	1,200 s/h
Rated insulation voltage U_i :	60 V
Bounce time:	< 2 ms at 100 mm/s operating speed
Mech. lifetime:	1 million operations;
- emergency stop:	100,000 operations
Switch travel:	approx. 3 mm
Resistance to shocks:	100 g / 6 ms
Resistance to vibrations:	20 g, 10 ... 100 Hz
Wiring labels:	to EN 60947-1
Actuating force at end of travel (1NC/1NO):	8 N

Enabling switch

ZSD 5

- Thermoplastic enclosure
- 3 levels OFF-ON-OFF
- Good resistance to petroleum spirit and oil
- 2 NO contacts
1 auxiliary contact (NC contact) (level 2 -> level 1)
- Contacts do not close upon reset (level 3 -> level 1)
- Positive break (level 2-> level 3)
- The redundant contact configuration enable signal evaluation with common safety relay modules
- Particularly fit for robot applications in accordance with the ANSI Robotics Standard

ZSD 6

- Supplementary push-button in device head
1 NO contact (ZSD 6)
- Other product variants and details can be found on the end of this chapter.

ZSD-H

Note

Evaluation of an enabling switch of the ZSD 5/ZSD 6 series by means of a safety-monitoring module of the SRB series, 2-channel with cross-wire detection.

- Jog key control (optional) to start the machine in jog mode
- Superposed evaluating module monitors the emergency stop position of the push-button
- External switch-over from automatic to set-up mode required

Safety foot switches

TFH 232-..UEDR

- Safety-related function with overlapping contacts, pressure point and latching
- 2 or 4 contacts
- Metal enclosure
- Protective shield with wide opening
- Low pedal height
- High level of stability
- Cable entry M20

T2FH 232-..UEDR

- 4, 6 or 8 contacts
- 2 cable entries M25

Technical data

Standards: IEC/EN 60947-5-1
DIN VDE 0660-200
BG-GS-ET-15

Material of the enclosure, cover and protective shield: aluminum die-cast
Housing coating: powder-coated
Material of the pedal: glass fiber reinforced thermoplastic

Mechanical data

Design of electrical connection: screw terminals
- Max. cable section: max. 2.5 mm² (incl. conductor ferrules)

Cable entry: 1-pedal: 1 x M20
2-pedal: 2 x M25

Mechanical life: > 1 million operations
Switching frequency: max. 1 / s
Resistance to shock: 30 g / 11 ms
Resistance to vibration: 10 ... 150 Hz (0.35 mm / 5 g)

Ambient conditions

Ambient temperature: -25 °C...+60 °C
Storage and transport temp.: -25 °C...+85 °C
Relative humidity: 30% ... 95%
- non-condensing
- non-icing

Protection class: IP65 to IEC/EN 60529
Overvoltage category: III
Degree of pollution: 3

Electrical data

Design of the switching element: NC, NO
Switching principle: slow action
Rated impulse withstand voltage U_{imp}: 800 V
Rated insulation voltage U_i: 32 VDC
Thermal test current I_{the}: 10 A
Utilization category: DC-13: 24 V / 1 A
AC-15: 230 V / 4 A

Required rated short-circuit current: 1000 A
Max. fuse rating: 6 A gG D-Sicherung
Dimensions: 1-pedal: 170 x 189 x 274 mm;
2-pedal: 295 x 189 x 274 mm

Two-hand control panels

SRB 201ZH

Monitoring two-hand control panels to EN 574 III C

- 2 safety contacts, STOP 0
- 1 auxiliary NC contact
- With feedback circuit
- With electronic protection
- 2 LEDs to show operating conditions
- Plug-in screw terminals

Technical data

Standards:	IEC/EN 60204-1, EN 60947-5-1, EN ISO 13849-1, IEC 61508
Feedback circuit (Y/N):	yes
ON delay with automatic start:	typ. 50 ms
Drop-out delay:	typ. 30 ms
Rated operating voltage U_e :	24 VDC -15%/+10% residual ripple max. 10%
Fuse rating for the operating voltage:	Internal electronic trip, tripping current F1/F2: > 0.2 A, tripping current F3: > 0.6 A
Internal electronic protection (Y/N):	yes
Power consumption:	1.2 W
Monitored inputs:	
- Short-circuit recognition:	yes
- Wire breakage detection:	yes
- Earth connection detection:	yes
Number of NC contacts:	2
Number of NO contacts:	2
Max. conduction resistance:	max. 40 Ω
Outputs:	
Stop category:	0
Number of safety contacts:	2
Number of auxiliary contacts:	1
Max. switching capacity of the safety contacts:	250 VAC, 6 A resistive (inductive in case of appropriate protective wiring); min. 10 V, 10 mA
Utilization category to EN 60947-5-1:	AC-15; DC-13
Fuse rating of the safety contacts:	6.3 A slow blow
Fuse rating of the auxiliary contacts:	2 A slow blow
Mechanical life:	10 million operations
Ambient conditions:	
Ambient temperature:	-25 °C ... +45 °C
Storage and transport temperature:	-40 °C ... +85 °C
Protection class:	Enclosure: IP40, Terminals: IP20, Clearance: IP54
Mounting:	Snaps onto standard DIN rail to EN 60715
Connection type:	Screw terminals, plug-in
- min. cable section:	0.25 mm ²
- max. cable section:	2.5 mm ²
Weight:	200 g
Dimensions (Height x Width x Depth):	120 x 22.5 x 121 mm

Ordering details

SRB 201ZH-24VDC

Classification

Safety parameters:

Standards:	EN ISO 13849-1, IEC 61508, EN 60947-5-1
PL:	STOP 0: up to e
Category:	STOP 0: up to 4
PFH value:	STOP 0: $\leq 2.00 \times 10^{-8}/h$
SIL:	STOP 0: up to 3
Mission time:	20 years

The PFH value of $2.00 \times 10^{-8}/h$ applies to the combinations of contact load (current through enabling contacts) and number of switching cycles (n-op/y) mentioned in the table below. At 365 operating days per year and a 24-hours operation, this results in the below-mentioned switching cycle times (t-cycle) for the relay contacts. Diverging applications upon request.

Contact load	n-op/y	t-cycle
20 %	525,600	1.0 min
40 %	210,240	2.5 min
60 %	75,087	7.0 min
80 %	30,918	17.0 min
100 %	12,223	43.0 min

Two-hand control panels

Note

- Button A and B: 1 NC contact / 1 NO contact (note: the NC contact of the buttons A and B must be opened, before the NO contact closes. No overlapping contacts to avoid triggering of fuse F1 und F2).
- Relay outputs: Suitable for 2 channel control, for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- H_2 = Feedback circuit
- The control recognizes cross-short, cable break and earth leakages in the monitoring circuit.
- Simultaneity monitoring 0.5 seconds

Wiring diagram

LED

The integrated LEDs indicate the following operating states.

- Position relay K1
- Position relay K2

Note

- The wiring diagram is shown with guard doors closed and in de-energized condition.
- Inductive loads (e.g. contactors, relays, etc.) are to be suppressed by means of a suitable circuit.

Further products and program extensions

Hygiene-compliant command and signalling devices

The special requirements placed on the hygienic design of food processing machines including those of the standards EN 1672-1 and EN 1672-2 with basic safety and hygienic requirements for machinery of this kind have been transferred to this range of command and signalling devices.

The devices have protection class IP67/IP69K, which makes them suitable for outdoor applications and applications where high hygienic requirements are applicable.

More information can be found in the **NK Catalog**

Enabling switch in mobile control housing with 2 or 3 levels

The Pilot 10/20/30 versions can integrate other control devices and indicator lights.

Pre-wired versions with supplementary functions and a monitored "Parking position" are available as well.

More information can be found in the **ZB/03 Catalog**

Sub-assemblies for two hand control consoles

In addition to the standard two-hand operating panels, Schmersal can customize panels with additional control devices and illuminated indicator lights. We can also add additional bore holes or special paint finishes/colors to match specific application requirements.

Also available are a wide variety of floor stands, with options for spacer rings, height adjustment, foot-pedal switches, or rollers.

More information can be found in the **ZHS/08 catalog**

Safe switching and monitoring

Tactile safety devices

Wherever crushing or shearing points are to be safeguarded, such as on elevating platforms, rising stages, sliding doors or industrial gates, tactile safety devices offer a simple and easy to fit solution. In the hazardous area, two-dimensional safety devices could be useful as well, for instance at industrial robots, punching machines and woodworking machines.

Safety mats	3-12
Program extensions	3-16

Safety edges

SE 40

- Control category optionally 1, 3 or 4 in combination with the SE-100C, SE-304C or SE-400C safety-monitoring module
- Modulated infra-red signal
- Interference-proof against external light
- Regulated transmitter, i.e. automatic adaptation for distance to receiver
- Constant sensitivity independently of the length of the safety edge
- Lengths from 0.4 m to 8 m possible
- Dirt and moisture in the profile are to a great extent compensated
- Transmitter/receiver potted, protection class of the signal transmitter IP67
- Insensitive to environmental conditions
- Max. distance sensors / evaluation 200 m

SE 70

Resistant to chemicals of the rubber material:

International abbreviation	EPDM (APTK)
Chemical name:	ethylene propylene ter polymer
Resilience at 20°C:	good
Resistance against permanent deformation:	good
General resistance against atmospheric conditions:	excellent
Resistance against ozone:	excellent
Resistance against oil:	low
Resistance against fuels:	low
Resistance against solvents:	low to satisfactory
General resistance against acids:	good
Temperature resistance:	
Short exposition:	- 50°C ... + 170°C
Long exposition:	- 30°C ... + 140°C

If a higher resistance is required, choose safety edge profiles with 20 µm plastic coating. The coating must be submitted to low mechanical loads only.

Technical data

Standards:	EN 1760-2
Material:	
- Rubber profile:	EPDM, 65 Shore A (optionally with 20 µm plastic coating)
- Emitter/Receiver:	polyurethane
- Mounting profile:	Al-Mg Si OF22
Protection class:	to EN 60529
- Emitter/Receiver :	IP68
- Signal transmitter, complete:	IP67
Mode of operation:	Optoelectronic
Possible length:	40 cm ... 8 m
Operating range of the homologated signal transmitter:	+5 °C ... +55 °C
Max. permanent load:	on the operational switching zone 500 N
Operating speed:	Signal transmitters: max. 100 mm/s, (Exception: SE-P40 with SE-400C: max. 40 mm/s)
Response travel:	max. 9 mm
After-travel:	P 40: max. 18 mm P 70: max. 45 mm
Connection:	Transmitter/Receiver: cable 3 x 0.14 mm² flexible
Cable length:	
- Receiver:	3 m or 20 m
- Emitter:	6.5 m or 10.5 m
Mechanical life:	20 million operations

* Certification in combination with safety monitoring modules SE-100C, SE-304C or SE-400C. Coated and NBR profiles are not included in this approval.

Rubber profile SE-P^{①②③}

No.	Replace	Description
①		Uncoated profile
	C	Coated profile
②	40	40 mm high EPDM
	40NBR	40 mm high NBR
	70	70 mm high EPDM
③	XXXX	Profile length in mm
	1250	1,250 mm
	2500	2,500 mm
	5000	5,000 mm
	10000	10,000 mm

Note

A safety edge system consists of individual components. The components must be ordered separately.

(Example)

- Rubber profile, SE-P40-1250
- Al profile, SE-AL 10-1250
- Emitter/ Receiver SE-SET
- Safety-monitoring module, SE-304 C
- Options: Caps, SE-T40; Sticker, SE-G8406
- Other accessories

Note

In the extremities of the safety edge at approx. 60 mm (SE 40) or 50 mm (SE 70) finger guard is not guaranteed. Upon actuation of this area, the transmitter/receiver is pushed into the lower profile section and the switching signal is evaluated, but the required forces are high though. If this restriction is not acceptable for the specific application, constructive measures must be taken.

SRB 301HC

- Safety-monitoring module for safety mats
- 3 enabling contacts
- 1 signalling contact
- Cross-wire detection
- Feedback circuit to monitor external contactors
- Monitored start or automatic start
- LED status indication
- Plug-in terminals

Technical data

Standards:	IEC/EN 60204-1, IEC/EN 60947-5-1, EN ISO 13849-1; IEC 61508
Start conditions:	automatic or start button (optionally monitored)
With feedback circuit (Y/N):	yes
ON delay with reset button:	≤ 50 ms
Drop-out delay on „emergency stop“:	≤ 20 ms
Drop-out delay on „supply failure“:	≤ 100 ms
Rated operating voltage U_e :	48 ... 240 VAC; 24 VAC/DC
Frequency range:	50 / 60 Hz
Fuse rating for the operating voltage:	
230 VAC version: primary side:	smelting fuse, tripping current > 1.0 A;
secondary side:	internal electronic fuse, tripping current > 0.12 A;
24 VAC/DC version:	internal electronic fuse, tripping current > 0.5 A
Internal electronic fuse (Y/N):	230 VAC version: no
	24 VAC/DC version: yes
Current consumption:	230 VAC version: 1.6 W; 4.2 VA
	24 VAC/DC version: 1.4 W; 3.3 VA
Inputs monitoring:	
-Cross-wire detection:	yes
- Wire breakage detection:	yes
- Earth leakage detection:	yes
Number of NC contacts:	2
Number of NO contacts:	0
Max. total line resistance:	40 W
Outputs:	
Stop category 0:	3
Stop category 1:	0
Number of safety contacts:	3
Number of signaling outputs:	1
Max. switching capacity of the safety contacts:	250 VAC, 8 A resistive (inductive with suitable protective circuit)
Utilization category to EN 60947-5-1:	AC-15: 230 V / 6 A; DC-13: 24 V / 6 A
Mechanical life:	107 operations
Ambient conditions:	
Operating ambient temperature:	-25°C ... +60°C
Storage and transport temperature:	-25°C ... +85°C
Protection class:	enclosure: IP40, terminals: IP20, terminal space: IP54
Mounting:	snaps onto standard DIN rails to DIN EN 60715
Connection type:	plug-in type screw terminals
- min. cable section:	0.25 mm ²
- max. cable section:	2.5 mm ²
Weight:	230 VAC version: 340 g; 24 VAC/DC version: 320 g
Dimensions (height/width/depth):	100 x 45 x 121 mm

Ordering details

SRB 301HC/①-②

No.	Option	Description
①	R	Manual start
	T	Automatic start
②	230 V	48 ... 240 VAC
	24 V	24 VAC/DC

Classification

Safety parameters:

Standards:	EN ISO 13849-1, IEC 61508, EN 60947-5-1
PL:	STOP 0: up to e
Category:	STOP 0: up to 4
PFH value:	STOP 0: ≤ 2.00 x 10 ⁻⁸ /h
SIL:	STOP 0: up to 3
Mission time:	20 years

The PFH value of 2.00 x 10⁻⁸/h applies to the combinations of contact load (current through enabling contacts) and number of switching cycles (n-op/y) mentioned in the table below. At 365 operating days per year and a 24-hours operation, this results in the below-mentioned switching cycle times (t-cycle) for the relay contacts. Diverging applications upon request.

Contact load	n-op/y	t-cycle
20 %	525,600	1.0 min
40 %	210,240	2.5 min
60 %	75,087	7.0 min
80 %	30,918	17.0 min
100 %	12,223	43.0 min

Safety mat

Note

- Protection of a safety mat
- Start button with edge detection
- Feedback circuit (H) to monitor the external contactors
- Series-wiring of multiple safety mats possible
- Reset button (R)

Wiring example

LED

The integrated LEDs indicate the following operating states.

- Position relay K1
- Position relay K2
- Supply voltage U_B

Note

- The wiring example is shown with the safety mat in non-actuated and de-energized condition.
- Inductive loads (e.g. contactors, relays, etc.) are to be suppressed by means of a suitable circuit

Further products and program extensions

SSG-SBL safety bumper

Safety bumpers are often used to monitor automated-guided vehicles or at rotating machine components where long run-ons, up to approximately 400 mm, can be expected.

Contrary to the conventional safety devices of this kind, the BIA-approved SSG-SBL has a dual-channel design. Several modules are available for signal monitoring.

STW-SL safety edges

Safety edges are used for the protection of shearing and crushing points.

Depending on the application, different rubber profiles and rails are available.

Special advantage: Depending on the system, geometrically more complicated and customer-specific models without dead corners can be produced.

Safe switching and monitoring

Optoelectronic safety devices

Schmersal offers a comprehensive range of active optoelectronic devices (AOPD) to provide non-separating safeguarding of hazardous areas, ranging from point of operation to danger zone or perimeter guarding. These “virtual safety guards” are available as safety light barriers, safety light grids and safety light curtains. They are available with different functions such as blanking, muting, cascading, or cyclic operation. IP69K versions are also available. A large assortment of accessories such as deflecting mirrors and mounting brackets helps the user in installing and using AOPD in his specific application.

Our safety light curtains and grids feature one-piece extruded aluminum housings, in rectangular and circular profiles. This closed housing profile has proven to be less susceptible to mechanical damage, misalignment from torsion or bending, and relieves the stress normally put on the lens in other light curtains.

Further detailed information on this product group can be found in the Optoelectronics catalog

Safety light curtains and safety light grids

SLC 440

- **Safety light curtain**
- Type 4 to EN 61496-1, CLC/TS 61496-2
- Resolution 14 and 30 mm
- Protection field heights 170 mm ... 1770 mm
- Integrated start/restart interlock
- Integrated contactor control
- Integrated blanking function (fixed and mobile blanking)
- Diagnostic and parametrization interface
- Range 0,3 m ... 10 m
- Fail-safe transistor outputs
- Optical synchronisation
- LED Status display, 7-segment display
- Protection class IP67

Legend: A = Total length
A = 81 mm + Protection field height

SLG 440

- **Safety light grid**
- 2-, 3- or 4-beam light grid
- Range 0,3 ... 12 m

Legend: A = Total length
2-beam A = 610 mm
3-beam A = 910 mm
4-beam A = 1010 mm

Technical data

Standards: EN 61496-1; CLC/TS 61496-2
 Category: Type 4
 Enclosure: aluminum
 Enclosure dimensions: 27.8 x 33 mm
 Connection: Connector plug
 - Emitter: M12, 4-pole,
 - Receiver: M12, 8-pole
 Max. cable length: 100 m / 1 Ω
 Protection class: IP67 to EN 60529
 Response time: 10 ... 27 ms (depends on length and resolution)

Detection sensitivity (Resolution): 14 and 30 mm
 Protection field height:
 - Resolution 14 mm 170 ... 1210 mm
 - Resolution 30 mm 170 ... 1770 mm
 - 2-, 3-, 4-beam 500, 800, 900 mm
 Protection field width, Range:
 - Resolution 14 mm 0.3 m ... 7 m
 - Resolution 30 mm 0.3 m ... 10 m
 - 2-, 3-, 4-beam 0.3 m ... 12 m
 Start/restart interlock: Integrated
 Contactor control: Integrated
 Blanking function: Integrated
 Light emission wavelength: 880 nm (infrared)
 U_e: 24 VDC ± 10%
 Safety outputs: 2 x PNP, 250 mA
 Power consumption: Emitter 1,8 W, Receiver 3,8 W

Status and diagnostics: LED-, 7-segment display
 Ambient temperature: -10 °C ... +50 °C
 Storage and transport temperature: -25 °C ... +70 °C

Classification:
 Standards: EN ISO 13849-1; EN 62061
 PL: up to e
 Category: up to 4
 PFH-value:
 - SLC 440 11,4 x 10⁻⁹ /h
 - SLG 440 8,14 x 10⁻⁹ /h
 SIL: up to 3
 Service life: 20 years

Technical data

Standards: IEC/EN 61496-1/-2
Category: Type 4
Enclosure: aluminum protective tube housing PMMA
Enclosure dimensions: Ø 60 mm
Connection: Cable (5 m) with
- Receiver connector M12, 8-pole
- Emitter connector M12, 4-pole
Max. cable length: 100 m / 1 Ω
Protection class: IP69K to EN 60529
Response time: 10 ... 27 ms (depends on length and resolution)

Detection sensitivity (Resolution): 14, 30 mm
Protection field height:
- Resolution 14, 30 mm 170 ... 1450 mm
- 2-, 3-, 4-beam 500, 800, 900 mm
Protection field width, Range:
- Resolution 14 mm 0.3 m ... 7 m
- Resolution 30 mm 0.3 m ... 10 m
- 2-, 3-, 4-beam 0.3 m ... 18 m
Start/restart interlock: Integrated
Contactor control: Integrated
Blanking function: Integrated
Cascading: (Master/Slave) -
Light emission wavelength: 880 nm (infrared)
U_e: 24 VDC ± 10%
Safety outputs: 2 x PNP, 500 mA
Power consumption: Emitter 4 W, Receiver 8 W

Data interface: RS 485
Status and diagnostics: LED display
Ambient temperature: -10 °C ... +50 °C
Storage and transport temperature: -20 °C ... +70 °C

Classification:

Standards: EN ISO 13849-1; IEC 61508; IEC 60947-5-3

Protective enclosure with deflecting mirror

Protective enclosure

Deflection Mirror Application Notes

ULS-M: Must be used when range is greater than 6m. With 1 mirror, range reduced by 10%, with 2 or more mirrors range reduced by 15% for each mirror.

ULS-A4: Must be used when range is less than 6m. With a loss of 20% at each mirror, only 1 mirror per emitter/receiver pair is recommended.

Safety light barriers

SLB 200-C

- Up to two pairs of light barrier devices can be connected
- Co-ordinated for use with SLB 200 R/E safety light barriers
- 1 safety contact, STOP 0
- 1 signaling output
- Operating voltage 24 VDC
- Test input
- LED display of switching conditions
- Response time ≤ 30 ms
- Start/Restart interlock can be switched active or inactive
- Contactor monitoring can be switched active or inactive
- Additional cyclic testing

Technical data

Standards:	IEC/EN 61496-1/-2, IEC 60947-5-3, IEC 61508
Start conditions:	Test button, start-reset button, ON/OFF coding
Feedback circuit (Y/N):	yes
Max. switching frequency:	10 Hz
Rated operating voltage U_e :	24 VDC \pm 20%
Rated operating current I_e :	180 mA
Outputs:	
Stop category 0:	1
Stop category 1:	0
Number of safety contacts:	1
Number of auxiliary contacts:	0
Number of signaling outputs:	1
Max. switching capacity of the safety contacts:	8 A
Switching capacity of the signaling outputs:	500 mA
Max. fuse rating of the safety contacts:	4 A gG D-fuse
Utilization category to EN 60947-5-1:	AC-15: 250 V / 2 A DC-13: 24 V / 2 A
Ambient conditions:	
Environmental temperature:	0 °C ... +50 °C
Storage and transport temperature:	-20 °C ... +80 °C
Protection class:	Enclosure: IP40, Terminals: IP20, Clearance: IP54
Mounting:	Snaps onto standard DIN rail to EN 60715
Connection type:	Screw connection
max. cable section:	4.0 mm ² (incl. conductor ferrules)
Dimensions (Height/Width/Depth):	84 x 45 x 118 mm

Approvals

SLB 200-C04-1R

Safety light barriers

Note

- Monitoring two pairs of light barrier devices and the power contactor using the SLB 200-C safety monitoring module
- Test push button T
The test push button is connected to X13 and X14 in order to carry out a check of the light barrier monitoring function. The terminals X15 and X16 must be bridged.
- The wiring diagram is shown for the de-energized condition.
- Contactor check
To monitor an external contactor, the feed-back circuit is connected to X17 and X18. The terminals X19 and X20 must be bridged.
- Start push button S
The start push button can be used to start the monitoring of the light barriers for a new start or after an interruption. The terminals X3 and X4 must be bridged.
- It is also possible to connect only one pair of light barrier devices.

Wiring diagram

Note

In order to set for the desired mode of operation and number of light barriers connected, remove the front cover of the safety monitoring module. As supplied all switches are in Position 1.

The required functions can be selected by means of the internal DIPswitches.

	DIPswitch 1	DIPswitch 2	DIPswitch 3
Position 1	With contactor check	With start/restart interlock	Connection of two light barriers
Position 2	Without contactor check	Without start/restart interlock	Connection of one light barrier

Inductive loads (e.g. contactors, relays, etc.) are to be suppressed by means of a suitable circuit.

Safety light barriers

SLB 400-C

- Up to 4 light barrier pairs SLB 400 can be connected
- Co-ordinated for use with SLB 400 R/E safety light barriers
- 2 safety contacts, STOP 0
- 2 signaling outputs
- Cross-wire monitoring
- ISD Integral System Diagnostics
- Operating voltage 24 VDC
- Feedback circuit to monitor external contactors
- Two short-circuit proof additional transistor outputs
- Response time ≤ 30 ms
- Start/Restart interlock can be switched active or inactive
- Contactor monitoring can be switched active or inactive
- Can be coded

Technical data

Standards:	IEC/EN 61496-1/-2, IEC 60947-5-3, IEC 61508
Start conditions:	Start-reset button, ON/OFF coding
Feedback circuit (Y/N):	yes
Max. switching frequency:	10 Hz
Rated operating voltage U_e :	24 VDC \pm 15%
Rated operating current I_e :	0.3 A without additional transistor outputs and safety light barriers
Max. fuse rating of the operating voltage:	1 A
Outputs:	
Stop category 0:	2
Stop category 1:	0
Number of safety contacts:	2
Number of auxiliary contacts:	2
Number of signaling outputs:	2
Max. switching capacity of the safety contacts:	2 A
Switching capacity of the auxiliary contacts:	2 A
Switching capacity of the signaling outputs:	100 mA
Max. fuse rating of the safety contacts:	2 A gG D-fuse
Utilization category to EN 60947-5-1:	AC-15: 250 V / 2 A DC-13: 24 V / 2 A

Ordering details

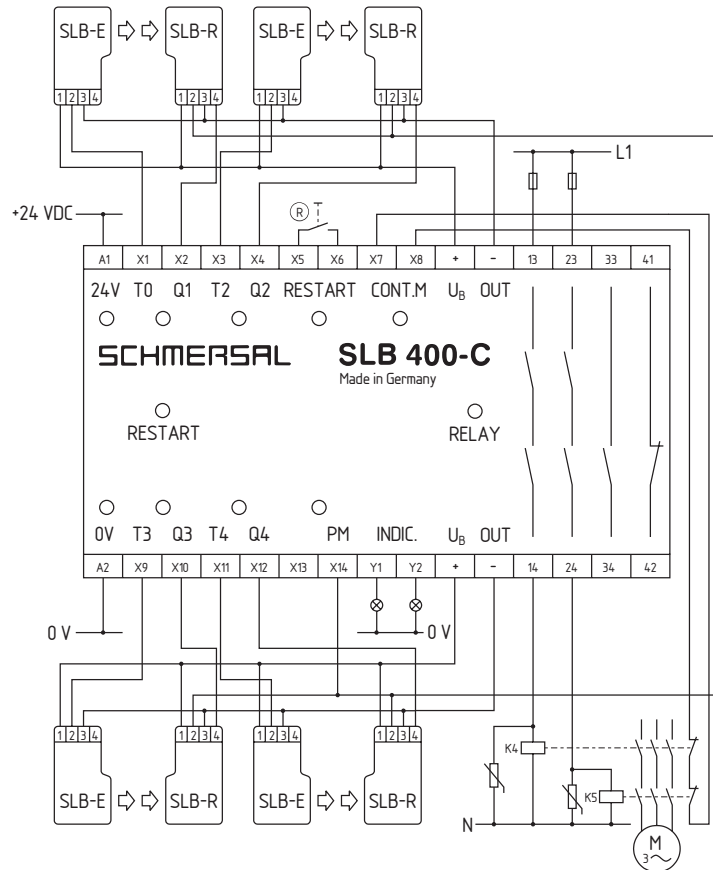

SLB 400-C10-1R

Safety light barriers

Note

- Monitoring up to four pairs of light barrier devices and the power contactors using the SLB 400-C safety monitoring module
- The wiring diagram is shown for the de-energized condition.
- Connection of two pairs of safety light barrier devices
When two pairs of safety light barriers are connected, the terminals X9-X10 and X11-X12 must be bridged.
- Restart push button 
The restart function can be selected by means of the DIPswitches. When a start push button is connected to X5 and X6, it must be operated for min. 250 ms and max. 5 s after an interruption of the safety light barriers.

Wiring diagram

ISD

The following faults are registered by the safety monitoring modules and indicated by ISD

- Short-circuit on the connecting leads
- Interruption of the connecting leads
- Failure of the safety relay to pull-in or drop-out
- Fault on the input circuits or the relay control circuits of the safety monitoring module
- Mutual influence between the connected pairs of light barrier device and others on neighbouring systems

Note

The ISD tables (Integral System Diagnostics) for analysis of the fault indications and their causes are shown in the manual.

Inductive loads (e.g. contactors, relays, etc.) are to be suppressed by means of a suitable circuit.

³ **SRB 301LC/B**: Performance Level e (Control Category 4) when used with a PLe input device which features self-monitoring

⁴ **Safety Switch**: Devices having dry contacts, e.g., keyed interlock switches with and without guardlocking, limit switches, cable pulls, hinge switches, foot switches, etc.

⁵ **AOPD**: Active Optical Protective Device, e.g. safety light curtain

⁶ **Automatic**: Safety outputs enabled as soon as safety inputs are satisfied (no reset signal required)

***Manual**: Safety outputs enabled when safety inputs are satisfied and reset signal supplied (0v to 24v transition)

***Monitored Manual**: Safety outputs enabled when safety inputs are satisfied and reset signal supplied (24v to 0v transition)

Input Expansion Modules

A majority of standard safety controllers used in the industry today will monitor 1 discrete device with 2 channels. Depending on the safety level to be obtained, wiring multiple switches in series to one safety controller can be a solution to scenarios such as an expanding application. This form of “daisy-chaining” however will not allow for individual diagnostics for low level safety device (i.e., limit switches) and can increase installation time and costs. Input expanders allow multiple devices to be wired to one safety controller while still having the ability of individual diagnostics. Multiple PROTECT input expanders can be used to wire a maximum of 80 dual channel devices.

	No. of 2 Channel Devices Monitored	Type of Monitored Input	Output Configuration	Input Configuration	Terminal Connection	Model Code	E-Stop Monitoring	Safety Switch ¹	Coded Magnetic Sensor	AOPD ²	Pulse Echo Compatible	Module Indicator ³ (PNP Out)

					Screw Terminals	PROTECT-PE-02-SK	√	√	√	√	√	√

¹ **Devices having dry contacts**, e.g., keyed interlock switches with and without guard locking, limit switches, cable pulls, hinge switches, foot switches, etc.

² **AOPD**: Active Optical Protective Device, e.g. safety light curtain

³ **Module Indication**: +24VDC PNP auxiliary signal indicating that all inputs are satisfied on the expansion unit.

For complete technical information, please visit www.usa.schmersal.net

Output Expansion Modules

Output expanders allow a safety controller to increase the number of safe signals that can be delivered. Each SRB-EM module will provide an additional 4 dry contact safety outputs, 2 dry contact auxiliary contacts and a connection to the main monitoring safety controller to complete an external feedback monitoring loop for the safety function.

	Additional Safety Outputs	Additional Auxiliary Outputs	Terminal Connection	Operating Voltage	Model
Output Expanders	4	2	Screw Terminals	24VAC/DC	SRB 402 EM
				115VAC	SRB 401 EM

Dual Zone Monitoring

The SRB 202C and SRB 400C safety controllers allow for dual zone monitoring without adding the complexity of using a safety PLC. No software or programming tool is required for zone setup. Input 1 is reserved for a global shutdown (the release of all safety outputs) such as an E-Stop actuation. Input 2 is reserved for dropping out only half of the safety outputs of the relay. (More information can be found on Page 9.)

SYSTEM OVERVIEW OF PROTECT-PSC

The PSC power and PSC-CPU-MON modules with 8 safe inputs and 6 safe outputs form the basic configuration for PROTECT-PSC. (For description, see next page.)

Expand safety with:

- Safe input modules
PSC-S-IN-E and PSC-S-IN-LC
- Safe output modules
PSC-S-IN-OUT and PSC Relay
- Safe input/output modules
PSC-SUB-MON, PSC-STP-E,
PSC-S-STP-LC and PSC-S-STP-ELC

Expand operationally

- (right, gray terminals) with:
- Operational input modules
PSC-NS-IN
 - Operational output modules
PSC-NS-OUT

Module	Number of single channel inputs				Number of single channel outputs				
	Standard signals with dry contacts	Safe Dry	Non-floating	Selectable*	Standard signals with dry contacts		Safe Transistor		Relay
					0.3 A**	0.5 A**	0.3 A**	4 A**	
PSC-CPU-MON	—	4	—	4	—	6	—	—

PSC-NS-IN	16	—	—	—	—	—	—	—	
PSC-NS-OUT	—	—	—	—	16	—	—	—	

* The dry or non-floating information refers to the technical properties of the input signals:

- **Dry-contacts input signals**, e.g. from emergency stop control devices, safety switches, interlocking devices, safety solenoid switches and similar.
- **Non-floating input signals**, e.g. PNP outputs from optoelectronic protective devices such as safety light curtains, laser scanners etc., but also from safety sensors from Schmersal CSS or AZM200 ranges.
- **Selectable**, input signals are monitored without cross short recognition. Outputs from optoelectronic protective devices can be directly connected, or dry contacts can be monitored up to a PL_d.

** Maximum current per output with resistive load.

For complete technical information, please visit www.usa.schmersal.net

Glossary of Common Safety Terms

A

Authorized Output: an output from a safety controller's positive-guided relays (used to "authorize" or "enable" a machine's start circuit when safety system conditions exist). Also known as "safety output."

Automatic Reset: a safety controller reset circuit that automatically resets the safety controller when safe system conditions (no system faults) exist. A manual reset button is optional.

Auxiliary Output: a non-safety related contact closure or semiconductor output primarily used for signaling component or system status to a PLC, audible alarm or visual indicator (such as a stack light). Also called a "signaling contact" or "auxiliary monitoring contact".

ANSI (American National Standards Institute): an association of industry representatives who, working together, develop safety and other technical standards.

Auxiliary monitoring contact: See "auxiliary output".

B

BG (Berufgenossenschaft): an independent German insurance agency whose legislative arm recommends industry safety practices. One of many "notified bodies" authorized to certify that safety products comply with all relevant standards.

C

CE (Conformité Européenne) mark: a symbol (CE) applied to finished products and machinery indicating it meets all applicable European Directives. For electrical and electronic "finished products", such as a safety relay module, these include the Low Voltage Directive and, where relevant, the Electromagnetic Compatibility (EMC) Directive.

Coded Magnet Sensor: a two-piece position sensor consisting of an array of reed switches and a multiple magnet array-actuating element. Such devices will only deliver an output signal when the reed switch element is in the presence of a matched, multiple-magnetic field array. Coded-magnet sensors cannot be actuated using a simple magnet. Hence they are far more difficult to defeat/bypass than a simple magnetic switch or proximity sensor.

Control Reliability: A term applied to safety devices or systems which are designed constructed and installed such that the failure of a single component within the device or system does not prevent normal machine stopping action from taking place... but does prevent a successive machine cycle from being initiated.

CSA (Canadian Standards Association): an independent Canadian testing and standards-

making organization similar to Underwriters Laboratories (UL) in the U.S. "CSA-certified" products meet relevant CSA electrical and safety standards.

D

Declaration of Conformity: a manufacturer's self-certified document, signed by a highly-positioned technical manager, which lists all the Standards and Directives to which a product conforms. A Declaration of Conformity is mandatory for all CE-marked products, and for machine components which, if they fail, could lead to a dangerous or hazardous situation on a machine.

Defined Area: a predetermined area scanned by a light beam within which the presence of an opaque object of specified minimum size will result in the generation of a control signal.

Direct Action Contacts: See "positive break" contacts.

Diverse Redundancy: the use of different components and/or different microprocessor instruction sets written by different programmers in the design and construction of redundant components/circuits. Its purpose is to increase system reliability by minimizing the possibility of common-mode failure (the failure of like components used in redundant circuits).

Dual Channel Safety System: a safety control system characterized by two inputs; each connected to one of two independent safety circuits. Dual-channel systems are typically capable of detecting interconnection wiring faults such as open circuits, short-circuits and ground faults. As such they provide a higher level of safety than single-channel systems.

E

Electronic Safety Sensor: A safety switch that uses non-contact communication between the safety sensor and the actuator. Provides a large switching distance, a high degree of fail-safety, and tamper resistance. Contains a microprocessor to provide continual internal function tests and monitor safety outputs, and allows intelligent diagnostic as well as fast failure detection.

Emergency Stop (E-Stop): A manual device allowing an operator to safely stop a machine in an emergency situation.

European Machinery Directive (EMD) 2006/42/EC: a set of machine safety design requirements which must be satisfied to meet the Essential Health and Safety standards established by the European Economic Community. This Directive, and other relevant European Directives (such as the Low Voltage Directive, EMC Directive, et al) must be satisfied for the machine to bear the CE mark.

F

Fail-to-Danger: a component or system failure which allows a machine to continue operating, exposing personnel to a hazardous or unsafe condition.

Fail-to-Safe: a component failure causes the device/system to attain rest in a safe condition.

Fault Detection: the monitoring of selected safety system components whose failure would compromise the functioning of the safety system. The detection of such failures is known as "fault detection." Examples are:

- a short-circuit in the safety circuit's interconnection wiring
- an open-circuit in the safety circuit's interconnection wiring
- a welded contact in the safety controller's positive-guided relays
- an open machine guard

Fault Exclusion: the ability to minimize known possible component failures ("faults") in a safety system by design criteria and/or component selection. Simple examples of "excluded faults" are:

- The use of an overrated contactor to preclude the possibility of contact welding.
- Design of a machine guard such that the safety interlock switch actuator cannot be damaged.
- Selection of a suitable safety interlock switch.
- Use of positive-break safety interlock switches together with a self-monitoring safety relay module, such that the possibility of a contact weld resulting in the loss of the safety function is eliminated.

Feedback Loop: an auxiliary input on a safety controller designed to monitor and detect a contact weld in the primary machine-controlled device (e.g. motor contactor, relay, et al) having positive-guided contacts.

Force Guided Contacts: See "Positive Guided Contacts".

Fixed Barrier Guard: See "Hard Guarding".

G

Guard: a barrier that prevents entry of an individual's hands or other body parts into a hazardous area.

H

Hard Guarding: the use of screens, fences, or other mechanical barriers to prevent access of personnel to hazardous areas of a machine. "Hard guards" generally allow the operator to view the point-of-operation.

Hazardous Area: an area of a machine or process which presents a potential hazard to personnel.

I
Interlock: an arrangement in which the operation of one device automatically brings about or prevents the operation of another device.

Interlocked Barrier Guard: a fixed or movable guard which, when opened, stops machine operation.

L
Limit Switch: switch operated by the motion of a machine part or presence of an object. They are used for control of a machine, as safety interlocks, or to count objects passing a point.

M
Machine Primary Control Element (MPCE): an electrically powered component which directly controls a machine's operation. MPCE's are the last control component to operate when a machine's motion is initiated or stopped.

Machine Secondary Control Element (MSCE): a machine control element (other than an MPCE) capable of removing power from the hazardous area(s) of a machine.

Manual Start-Up Test: a term applied to safety controllers designed such that at least one of the system's interlocked machine guards must be manually opened and closed (after applying power) before machine operation is authorized.

Manually Monitored Reset: a safety controller reset circuit requiring the presence of a discrete "trailing-edge" signal (24V to 0V) to activate the controller's authorized outputs. A reset button is mandatory.

Muting: the ability to program a monitoring and/or control device to ignore selected system conditions.

N
Negative Mode Mounting: the mounting of a single piece safety interlock switch (e.g. a limit switch) such that the force applied to open the normally closed (NC) safety contact is provided by an internal spring. In this mounting mode the NC contacts may not open when the safety guard is "open". Here welded/stuck contacts, or failure of a contact-opening spring, may result in exposing the machine operator to a hazardous/unsafe area. When mounted in the "negative-mode", single-piece safety interlock switches can be easily circumvented/defeated by the operator...simply by taping down the switch actuator when the safety guard is open.

Non-Separating Guard: sensing devices such as light curtains, scanners, or pressure mats that detect the presence of operators, but do not provide a physical barrier between the operator and hazard.

O
OSHA (Occupational Safety Health Administration): a U.S. Department of Labor Federal agency responsible for monitoring and regu-

lating workplace safety. OSHA enforcement may reference their own regulations, as well as those of other industry standards-making groups (e.g. ANSI, NFPA, UL, et al).

P
PELV Circuits: Protected Extra Low Voltage. A method to avoid shock hazards. Circuits should be designed to guarantee a low risk of accidental contact with a higher voltage, and may be grounded.

Performance Level: outlined in EN ISO 13849-1, a required level of safety for SRPCS. Designated PLa through PLe.

PLC or Programmable Logic Controller: a digital computer used for automation of electromechanical processes, such as control of machinery on factory assembly lines, amusement rides, or light fixtures.

Point of Operation: the area(s) of a machine where material or the work piece is positioned and a process is performed.

Point of Operation Guarding: a device or guard installed at the interface between the operator and the point of operation which is intended to protect personnel from hazardous areas.

Position Switch: see "Limit Switch"

Positive Break Contacts: normally-closed (NC) contacts which, upon actuation, are forced to open by a non-resilient mechanical drive mechanism. Also called "positive-opening" or "direct-action" contacts.

Positive Guided Contacts: Normally-open (NO) and normally-closed (NC) contacts which operate interdependently such that the NO and NC contacts can never be closed at the same time. They are designed such that if one of the contacts welds/sticks closed, the other contacts cannot change state. The interdependent operation between NO and NC contacts permits self-checking/monitoring of the functioning of relays and contactors featuring positive-guided contacts. Hence they are desirable in machine safety circuits where "fail-to-safe" or "control reliability" is desired. Also called "force-guided contacts".

Positive Linkage: a term applied to roller lever, rocking lever and other switch actuating members designed such that the integrity of the linkage between the actuator and the shaft is heightened (beyond a set screw on a smooth shaft) by its mechanical design. Examples of positive-linkages are pinned, square and serrated shafts.

Positive Mode Mounting: the mounting of a single piece safety interlock switch (e.g. a limit switch) such that the non-resilient mechanical mechanism which forces the normally-closed (NC) contacts to open is directly driven by the interlocked machine safety guard. In this mode

(as opposed to "negative-mode mounting") the safety guard physically forces the NC contacts to open when the guard is opened.

Positive Opening Contacts: See "Positive-Break Contacts".

Pulse Echo: A non-contact technology patented by Schmersal for electronic safety sensors. It uses electromagnetic pulses to communicate between the sensor and actuator target. When approaching the sensor, the actuator oscillates at a predetermined resonant frequency which is detected by the sensor. While doing this, the sensor evaluates the coding of the actuator as well as its distance to determine a closed guard and enable safety outputs.

Push/Pull Operation: a term applied to emergency rope-pull switches designed to actuate when the rope/trip-wire is pulled and when it is pushed (goes slack). Such rope-pull switches provide a higher level of safety than units which only actuate when the trip-wire/rope is pulled.

R
Redundancy: the duplication of control circuits and/or components such that if one component/circuit should fail the other (redundant) component/circuit will ensure safe operation.

Risk Assessment: a systematic means of quantifying the relative level of danger different types of machine hazards present to the machine operator and/or maintenance personnel. This assessment is usually done in the early stages of the machine's design to permit such hazards to be designed-out or alternatively determine the scope of the safety system needed to protect personnel from possible injury.

RFID (Radio Frequency Identification): A non-contact technology for electronic safety sensors that uses radio waves to communicate between the sensor and actuator target. When approaching the sensor, the actuator broadcasts its identification number over the frequency detected by the sensor. The proximity of the actuator determines that the guard is closed and safety outputs are enabled.

S
Safeguarding: protecting personnel from hazards using guards, barriers, safety devices and/or safe working procedures.

Safety Controller: an electronic and/or electromechanical device designed expressly for monitoring the integrity of a machine's safety system. Such controllers are designed using positive-guided (force-guided) relays. Depending upon the model, safety controllers are capable of detecting the following types of potential safety system faults:

- Machine guard(s) open
- Guard monitoring switch/sensor failure
- Interconnection wiring "open circuit"
- Interconnection wiring "short circuit"
- Interconnection wiring "short-to-ground"

- Welded contact in controlled output device
 - Failure of one of the safety controller's positive-guided relays
 - Fault in the safety controller's monitoring circuit
 - Insufficient safety controller operating voltage
- Upon detection of a system fault, the safety controller will initiate a "machine stop" command and/or prevent the restarting of the machine until the fault has been corrected. The "stop" command may be immediate or time-delayed depending upon the model safety controller selected.

Safety Distance: for the proper placement of non-separating guards, a calculation of factors such as approach speed and system reaction time, to insure that the machine stops before the hazard is reached.

Safety Enable: see "Authorized Output."

Safety Interlock Switch: a switch designed expressly to safely monitor the position of a machine barrier guard. Such switches typically feature positive-break contacts and are designed to be more tamper-resistant than conventional position/presence-sensing switches.

Safety Output: see "Authorized Output."

Safety Relay: an electromechanical relay designed with positive-guided contacts.

Self Checking: the performing of periodic self diagnostics on the safety control circuit to ensure that critical individual components are functioning properly.

Self Monitoring: see "Self-Checking".

Separating guard: a panel, fence, window, or door that physically separates the operator from the hazard.

Serial Diagnostics: A system for series-wired electronic safety sensors that transmits the operational status of each participant in the chain to a central processor that is connected to conventional and commercially available PLC systems. It provides fast and accurate error messages with detailed information about the failure.

Single Channel Safety System: a safety control system characterized by one safety interlock switch whose normally closed contact is the sole input to a safety controller or a motor contactor. Such systems are unable to detect a short circuit failure in the interconnection wiring and are only recommended for addressing Safety Categories B, 1 and 2 (see "Risk Assessment").

Solenoid Latching Safety Interlock Switch: a two-piece safety interlock (actuating key and switch mechanism) whose design prevents the removal of the actuating key until released by an integral latching solenoid. Solenoid latching is typically controlled by a time-delay, motion

detector, position sensor or other control components.

Stop Category "0": immediate removal of power from the controlled devices.

Stop Category "1": removal of power after a time delay, up to 30 seconds. This is commonly used with drive systems where immediate removal of power may result in a longer stop time.

SRPCS (Safety Related Parts of Control Systems): systems or subsystems which perform a safety function.

T

Tamper Resistant: a term applied to safety interlock switches referring to their relative ability to be defeated or bypassed using simple, readily available means such as a screwdriver, paper clip, piece of tape or wire, etc. Switches and sensors designed expressly for use as machine guard safety interlocks are designed to be more "tamper-resistant" than conventional switches/ sensors (e.g. proximity switches, reed switches, conventional limit switches).

Time Delayed Authorized Outputs: a safety controller's authorized outputs whose activation is delayed (up to 30 seconds) to satisfy Stop Category 1 requirements.

Trailing Edge Reset: (See "Manually Monitored Reset.")

Two Hand Control: a machine control system which requires "simultaneous" use of both of the operator's hands to initiate a machine cycle.

U

UL (Underwriters Laboratories): an independent testing and standards-making organization. UL tests products for compliance to relevant electrical and safety standards/ requirements.

Machinery Safety Standards

EUROPEAN STANDARDS

The European safety requirements for man and machine are established in the European Machinery Directive (EMD). According to the EMD, machinery must be designed and built to meet the Directive's requirements as defined by existing and emerging European standards. These "European Norms", prepared by representatives of the European Economic Community (EEC) member states and produced by the European standards committees CEN and CENELEC, provide a harmonized baseline for the design and construction of safe machinery.

As of January 1, 1997, machinery sold into or within the EEC must comply with the requirements of the European Machinery Directive. Equipment which complies may be affixed with the CE mark (for "Conformité Européenne"). The CE mark on a machine signifies that it conforms to the essential health and safety requirements defined by the relevant European Norms.

These "Norms" form a hierarchical structure which include:

Type A Standards: Fundamental Safety Standards which contain basic concepts, principles of design, and general aspects applicable to all machinery.

Type B Standards: Group Safety Standards, each of which focuses on a specific subject applicable to a range of machinery types. "B1 Standards" cover a specific safety aspect defined in the Fundamental Standards. "B2 Standards" cover the requirements of specific safety related devices such as two-hand controls, interlocking devices, movable guards, etc.

Type C Standards: Specific Machine Safety Standards, each of which define protective measures required for hazardous areas of a specific machine or group of machines.

Type A and Type B Standards are intended to assist in the machinery design process, and eliminate the need to repeat these general requirements in the machine-specific (Type C) Standards.

Many product standards are still in the planning stage and the number of Type C Standards is continuously increasing. Some are still in draft form (designated as "prEN" standards). Others exist as finished ("EN") standards.

Where no machine-specific standard exists, the requirements of the Machinery Directive can be satisfied by observing existing European Standards and relevant national standards/specifications. Draft standards (prEN) published by the European Union are also accepted and used as a basis for evaluating products for compliance to the Directives. It is important to note that such draft standards may change before being finalized and adopted as EN standards.

Selected European Standards

Type "A" Standards:

EN ISO 12100,
Safety Machinery – Basic Concepts, General Principles of Design, Parts 1 & 2.

Type "B1" Standards:

EN ISO 13849-1
Safety of Machinery – Safety-Related Parts of Control Systems – Part 1: General Principles for Design

EN ISO 13857
Safety of Machinery – Safety Distances to Prevent Danger Zones from Being Reached by Upper and Lower Limbs.

EN349
Safety of Machinery – Minimum Gaps to Avoid Crushing of Parts of the Human Body.

EN ISO 13855
Safety of Machinery – The Positioning of Protective Equipment in Respect of Approach Speeds of the Human Body.

EN ISO 12100
Safety of Machinery – Principles of Risk Assessment.

Type "B2" Standards:

EN ISO 13850
Safety of Machinery – Emergency Stop Devices, Functional Aspects – Principles for Design.

EN 574
Safety of Machinery – Two-Hand Control Devices, Functional Aspects – Principles for Design.

EN1088
Safety of Machinery – Interlocking Devices Associated with Guards – Principles for Design & Selection.

EN 953
Safety of Machinery – General Requirements for the Design and Construction of Guards.

EN1760-1
Safety of Machinery – Pressure Sensitive Safety Devices – Mats & Floors.

EN1760-2
Safety of Machinery – Pressure Sensitive Safety Devices – Edges & Bars.

prEN61496
Safety of Machinery – Electrosensitive Protective Equipment.

Type "C" Standards:

EN415 Packaging Machines

EN692 Mechanical Presses

EN693 Hydraulic Presses

EN746 Thermoprocessing Machines

EN931 Footwear Manufacturing Machines

EN1114-1 Rubber & Plastics Machines

EN1672 Food Processing Machines

US STANDARDS

In the United States, the protection of workers is the primary concern of OSHA, the Occupational Health and Safety Administration, a division of the Department of Labor. OSHA's role is to assure safe and healthful working conditions for working men and women; by authorizing enforcement of the standards developed under the Occupational Safety & Health Act; by assisting and encouraging the States in their efforts to assure safe and healthful working conditions; by providing for research, information, education, and training in the field of occupational safety and health. OSHA is the primary regulatory agency for safety and health, setting national standards and providing for the enforcement thereof. OSHA also relies on consensus standards. These are guidelines and standards created by standards-making organizations, trade associations, and third party testing facilities. In the machinery industry, these include: American National Standards Institute (ANSI), Robotics Industry of America (RIA), Instrument Society of America (ISA), National Fire Prevention Association (NFPA), Underwriters Laboratories, Inc. (UL),

State OSH Standards

Section 18 of the Occupational Safety and Health Act of 1970 (the OSH Act) encourages states to develop and operate their own safety and health programs in the workplace. OSHA approves and monitors State Plans.

The following states have adopted safety and health standards:

Alaska
Arizona
California
Hawaii
Indiana
Iowa
Kentucky
Maryland
Michigan
Minnesota
Nevada
New Mexico
North Carolina
Oregon
South Carolina
Tennessee
Utah
Vermont
Virginia
Washington
Wyoming

CANADIAN STANDARDS:

In Canada, each province has its own regulatory body for occupational health and safety, such as the Ministry of Labour in Ontario. There are fourteen jurisdictions – one federal, ten provincial, and three territorial – each governing the way industrial safety is implemented and enforced in their specific province or territory. Federal legislation covers employees of the federal government and Crown agencies and corporations across Canada. In each province or territory, there is an act (typically called the Occupational Health and Safety Act, or something similar) which applies to most workplaces in that region.

Duties of Employers and Other Persons

The various Occupation Health and Safety Acts impose duties on those who have any degree of control over the workplace, the materials and equipment in the workplace, and the direction of the work force. There is a general duty on employers to take all reasonable precautions to protect the health and safety of workers. In addition, the Act and regulations set out many specific responsibilities of the employer. For example, there are duties that specifically relate to toxic substances, hazardous machinery, worker education, and personal protective equipment. There is a duty on all officers and directors of corporations to ensure that their corporations comply with the Act and regulations. The duties of workers are generally to work safely, in accordance with the Act and regulations.

Canadian Regulatory Agencies

Please find the regulatory agency in each province and territory as below:

Alberta
Workplace Health and Safety, Alberta Employment and Immigration

British Columbia
WorkSafeBC

Manitoba
SAFE Manitoba

New Brunswick
WorkSafeNB

Newfoundland and Labrador
Occupational Health and Safety Branch, Department of Government Services

Northwest Territories and Nunavut
Workers' Compensation Board of the Northwest Territories and Nunavut

Nova Scotia
Occupational Health & Safety Division, Nova Scotia Labour and Workforce Development

Ontario
Occupational Health and Safety Branch, Ministry of Labour

Prince Edward Island
Occupational Health and Safety Division, Workers' Compensation Board

Quebec
Commission de la santé et de la sécurité du travail du Québec (Occupational Health and Safety Commission of Quebec)

Saskatchewan
Occupational Health and Safety Division, Saskatchewan Ministry of Advanced Education, Employment and Labour

Yukon
Yukon Workers' Compensation Health and Safety Board

Resources:

There is also a national Canadian Standards Association that sets safety standards which are voluntary and represent best practices. CSA standards may be enforced by law when referenced in provincial, territorial or federal legislation or regulations. These standards are designed to be complementary to the actions of government in tackling the issue of worker safety and can provide tools to help organizations comply with regulations and demonstrate due diligence.

NEMA, UL, CSA & IEC INGRESS PROTECTION RATINGS

NEMA, UL, CSA and IEC have each established ratings systems intended to identify an enclosure's ability to repel elements from the outside environment. These rating systems address the enclosure's ability to protect against a variety of environmental conditions. These include:

- Incidental contact
- Rain, sleet and snow
- Windblown dust
- Hosedown and splashing liquids
- Falling dirt
- Oil or coolant spraying/splashing
- Corrosive agents
- Occasional temporary submersion
- Occasional prolonged submersion

While these ratings are intended to help you make a more informed product selection, there are some differences between each organization's system.

As shown in Table 1, the NEMA, UL and CSA ratings most commonly used in North America are based on similar application descriptions and expected performance. However, while UL and CSA require testing in the laboratories (and periodic manufacturer site inspections to ensure continued adherence to prescribed standards), NEMA leaves compliance and certification up to the manufacturer.

While the European IEC (IP) ratings summarized in Table 2 are based on similar test methods, their performance has some slight and subtle differences in interpretation. For example, selected IP ratings permit limited ingress of water, while UL/CSA ratings do not.

For your reference and convenience we have attempted to provide an approximate cross-reference between North American enclosure ratings (NEMA, UL and CSA) and selected IEC (IP) enclosure ratings (Table 3). Please recognize that these are nearest-equivalents only and should not be considered as direct comparisons.

**TABLE 1:
IEC (IP) Enclosure Ratings**

IP	Tests	IP	Tests
0	No protection	0	No protection
1	Protected against solid objects up to 50mm, e.g. accidental touch by hands	1	Protected against vertically falling drops of water, e.g. condensation
2	Protected against solid objects up to 12mm, e.g. fingers	2	Protected against direct sprays of water up to 15° from vertical
3	Protected against solid objects over 2.5mm, e.g. tools and wires	3	Protected against sprays to 60° from vertical
4	Protected against solid objects over 1mm	4	Protected against water sprayed from all directions (limited ingress permitted)
5	Protected against dust (limited ingress, no harmful deposit)	5	Protected against low pressure jets of water from all directions (limited ingress permitted)
6	Totally protected against dust	6	Protected against strong jets of water
		7	Protected against the effects of immersion between 1 cm and 1 m
		8	Protected against the effects of immersion beyond 1 m
		9K**	Protection against high pressure high temperature washdown applications

Example: IP 2 3

Characteristic letters _____
 1st characteristic numeral _____
 (Protection against solid objects)
 2nd characteristic numeral _____
 (Protection against liquids)

An enclosure with this designation is protected against the penetration of solid objects greater than 12mm and against spraying water.

**TABLE 2:

* These are nearest equivalents only, and should not be used to make direct conversions from IEC to NEMA classifications.

** Designed to meet DIN 40050, Part 9 (1983) Protection Type Test.

Safety distance for light curtains

Safety distances for light curtains

Between the interruption of a light beam and the standstill of the machine, a certain time expires. The safety light grid or light curtain must be sized and installed such that a stop would be signalled and the hazard ceased prior to a person or a body part accessing the hazard. The standard EN 999 provides the user with detailed information about the calculation of the minimum safety distances. These include the following important influencing factors:

- run-out time of the entire system, taking the different reaction times of the individual systems into account (e.g. machine, safety monitoring module, AOPD etc.)
- capacity of the AOPD to detect body parts (fingers, hand and entire human body)
- set-up of the safety guard in normal condition (vertical fitting), parallel condition (horizontal fitting) or at an arbitrary angle in front of the safety guard and
- the speed at which the protection field is approached.

For the calculation of the minimum safety distance **S** to the hazardous area, EN 999 presents the following general formula:

$$S = K \times T + C$$

Where:

S the safety distance to the dangerous area (mm)

K the approach speed of the body or the body part (mm/s)

T the entire reaction time of the system(s) (including the machine's run-out time, the reaction time of the safety guard and the safety monitoring module etc.)

C additional distance (mm) in front of the safety guard

Normal approach for light curtains:
(Resolution: max. 40 mm)

The minimum safety distance **S** is calculated in the following way:

$$S = 2000 T + 8 (D-14)$$

(D = Resolution)

This formula applies to safety distances up to 500 mm.

The minimum safety distance **S_{min}** may not be less than 100 mm.

If the calculation produces a distance larger than 500 mm for **S**, the calculation can be repeated with a lower approach speed:

$$S = 1600 T + 8 (D-14)$$

In this case, **S_{min}** may not be less than 500 mm.

If the dangerous area of the machine is accessible from the top because of its particular construction, the height **H** of the topmost beam of the light barrier must be at least 1800 mm above the base **G** of the machine.

**Normal approach
for light curtains:
(Resolution: from 40 mm
up to max. 70 mm)**

The minimum safety distance **S** is calculated in the following way:

$$S = 1600 T + 850$$

The height of the topmost light beam must be at least 900 mm, the height of the lowermost light beam maximum 300 mm above the bottom (for the protection of children younger than 14: 200 mm)

**Normal approach
for light grids:
(Resolution: > 70 mm)**

The minimum safety distance **S** is calculated using the following formula:

$$S = 1600 T + 850$$

For safety guards with multiple beams, height **H** (mm) above the reference floor of the individual beams must be applied in the following way:

Number of beams	Height above the reference floor
2	400, 900
3	300, 700, 1100
4	300, 600, 900, 1200

When using light curtains or light grids, particular attention must be paid to the tampering possibilities of the safety guard and to the mechanical risks (e.g. crushing, shearing, cutting, ejection).

**Horizontal approach
for light curtains/grids
(Resolution: > 50 mm)**

The minimum safety distance **S** is calculated using the following formula:

$$S = 1600 T + 1200 - 0.4 H$$

Here, **S_{min}** is 850 mm. The lowest authorised height **H** depends on the resolution **D** of the light curtain:

$$H = 15 (D-50)$$

For this type of safety guard, the maximum height **H** is 1000 mm. In the risk analysis, special attention must be paid to the prevention of unintentional undetected access from underneath the protection field.

Further calculation examples can be found in DIN EN 999 as well as in the mounting instructions of the SLC/SLG safety light curtains and grids.

General Terms and Conditions of Sale

ORDERS & BLANKET ORDERS

All orders must include proper description, pricing, quantity and shipping requirements. Buyer must contact the Seller's head-quarters for terms and conditions associated with blanket orders.

PRICES

Unless otherwise stated, prices are firm for thirty days. Seller reserves the right to revise price if there is a change in quantity, size, finish, or method and time shipment differing from those indicated herein. Prices and terms on this quotation and/or acknowledgement of order are not subject to verbal changes or other agreements unless approved in writing by the Seller's headquarters' staff. Unless otherwise negotiated, prices for orders for future delivery will be invoiced at the prevailing price at the time of shipment.

DELIVERY

All material is sold and priced F.O.B. Tarrytown, NY, USA. Unless otherwise specified by the Buyer, all shipments will be made via UPS Ground.

MINIMUM ORDER & PACKAGING CHARGES

Unless otherwise agreed upon, the minimum order billing is \$100 per shipment exclusive of shipping, insurance or other miscellaneous charges.

PAYMENT TERMS

Payment terms are net 30 days. Seller reserves the right to hold shipments to firms with unpaid past due balances. Seller also reserves the right to charge interest at the rate of 1.5% interest per month for accounts in arrears more than 30 days. This interest will never be greater than that allowed by local law.

TITLE

Title to material, priced at Seller's shipping point, shall pass to Buyer upon shipment. Any charges by carrier for switching, demurrage or other services shall be paid by the Buyer.

CHANGES & CANCELLATIONS

Should Buyer desire to cancel, revise or suspend this order for reasons beyond the Buyer's control, Seller shall discuss the matter promptly with the Buyer and do all possible to make a mutually satisfactory agreement. In cases where the material has been manufactured partially or completely for Buyer's requirements, Seller will advise Buyer of charges incurred to Buyer's account.

CLAIMS FOR DEFECTIVE MATERIALS

All material is warranted to be free from defects in quality and workmanship, and to meet the specifications to which ordered. The Seller's obligation under this warranty is limited to repairing or replacing defective material, or crediting the Buyer with the price of the defective material. If Buyer believes the material to be defective, Buyer must notify Seller within 30 days after delivery. Seller has the right to inspect any goods before determination of a reasonable settlement. Toward this end, Buyer must contact Seller's headquarters requesting a formal Return Material Authorization (RMA). Seller will not accept any material returns without reference to the RMA number of the Buyer's returned goods packing list.

ORDERS FOR NON-STANDARD/SPECIAL ITEMS

Unless otherwise negotiated and confirmed in writing by the Seller, orders for non-standard and special items made to the Buyer's specifications are non-cancelable. Seller reserves the right to bill Buyer for materials purchased for the production of such items, and for all goods fully or partially manufactured at the time of notice of the Buyer's desire to cancel the order.

SPECIAL TOOLING

Special tooling required and paid for by the Buyer shall become the property of the Buyer. Where such tooling incorporates trade secrets, it shall be held in perpetuity at the manufacturer's premises for the exclusive use of the Buyer.

GENERAL

All agreements are contingent upon strikes, accidents, fires, availability of materials and all other causes beyond the Seller's control. Typographical, accounting and other administrative errors are subject to correction. Buyer assumes the liability for patent and copyright infringement for goods made to Buyer's specifications. When Buyer furnishes material for use in production, ample allowance must be made for reasonable spoilage. Such materials must be of suitable quality to facilitate efficient production. Conditions not specifically stated herein shall be governed by established trade customs. Terms inconsistent with those stated herein that may appear on the Buyer's formal order will not be binding on the Seller.

SUSPENSIONS & CANCELLATIONS

Unless otherwise negotiated and agreed to by the Seller, the Buyer must accept final and/or complete delivery on all orders within 90 days from date of first shipment. Should the Buyer fail to accept the complete order within this or the negotiated period for order, the Seller reserves the right to cancel the order and re-bill the Buyer at the price schedule covering the total quantity of parts shipped through the date of cancellation.

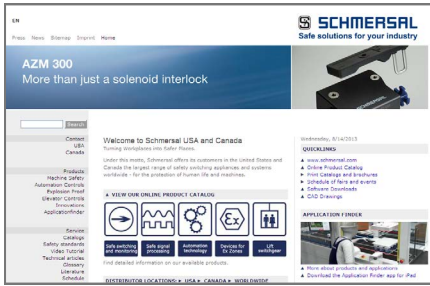

WARRANTY AND LIMITATIONS OF WARRANTY:

SCHMERSAL INC agrees to replace or repair products which have been found defective due to workmanship or material. This warranty is made only for a period within one year of the date of the invoice to the Buyer. This warranty applies to products which have been subjected to normal and proper usage, and to which inspection of the product by SCHMERSAL INC shows it to be thus defective. THE AGREEMENT TO REPAIR OR REPLACE SUCH PRODUCT IS LIMITED TO F.O.B. SHIPPING POINT AND IS IN NO WAY A LIABILITY FOR DAMAGES, DIRECT OR CONSEQUENTIAL, OR FOR DELAYS, INSTALLATION, TRANSPORTATION, ADJUSTMENT OR OTHER EXPENSES ARISING IN CONNECTION WITH SUCH PRODUCT. SCHMERSAL INC is not responsible in this warranty for product which is repaired or altered. Nor is SCHMERSAL INC responsible in this warranty for products subject to misuse, negligence, or accident. SCHMERSAL INC IS IN NO WAY LIABLE OR RESPONSIBLE FOR INJURIES OR DAMAGES TO PERSONS OR PROPERTY ARISING FROM OR OUT OF USE OF THE PRODUCT WITHIN DESCRIBED SPECIFICATIONS. Except for the warranty herein before stated, THERE ARE NO EXPRESS WARRANTIES AND NO IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, OTHER THAN THOSE EXPRESSLY SET FORTH ABOVE. THIS LIMITED WARRANTY IS IN LIEU OF AND EXCLUDES ALL OTHER REPRESENTATIONS MADE, BOTH EXPRESS AND IMPLIED, UNLESS SET FORTH IN WRITING AND SIGNED BY AN AUTHORIZED EXECUTIVE OF SCHMERSAL INC.

We are at your disposal - anyplace, anywhere , anytime!

Schmersal USA Website
www.schmersalusa.com

The Schmersal homepage contains up-to-date information on general subjects, technical articles on machine safety as well as news regarding events and trainings.

Need a distributor? State by state listings of our 100+ distributors can be found in our contact section.

This and all our printed catalogs are available for download as PDFs. There is a video section with product demonstrations, webinar recordings, safety tutorials, and product animations.

Sign up for our newsletter, the Gatekeeper, or check our schedule of upcoming events.

Online Product Catalog
www.usa.schmersal.net

The online catalog is continually updated. The technical data of our entire product range are always up-to-date. Declarations of conformity, test certificates, and mounting & wiring instructions can be viewed or downloaded as well.

The online catalog can be consulted in several languages: German, English, Spanish, French, Italian, Russian, Chinese, Japanese, and more.

The online catalog also includes dimensional drawings and links to CAD images of our products - a special service to designers. In this way, they can be downloaded and directly fed in CAD systems.

Application Finder
www.applicationfinder.net/us/home/

The Application Finder displays an interactive animated packaging plant floor. Users can click on one of the work areas which will open a window with a selection of Schmersal safety switching devices that are optimal for the particular application.

Each selection ultimately links to the Schmersal online product catalog website, where users can see technical data on the selected components.

There are many product-specific animations available throughout, explaining the operation of the switch or providing recommendations for the integration of safety technology into the processes of the machine.

Also available as an app for the iPad. Download from iTunes: search *Schmersal*

One Design. Multiple Solutions.

- Type 4 Safety light curtain
- Multiple integrated functions: Double reset, blanking, beam coding
- Simple push-button selection and configuration of functions
- Quick diagnostic via end cap LED display on receiver unit
- Integrated alignment tool for easy set up.
- Integrated 7-segment display aids set up and shows operation faults
- Stable, robust, closed profile reduces mechanical stress on lens cover
- No controller or programming software needed
- Rapid response time
- Versions for finger, hand, or body detection
